Hi Lori,

I got your check and amendment in the mail today, thank you for working on this. I see that the amendment that I sent out originally is not the copy that landed in my in-box. We decided not to allow a PPU for this right because there is no evidence that water is available for acres other than the 200 acres that are authorized. I have attached my licensing memo for your review and the POU that will be licensed under this right. If there is evidence that supports a 1,284 acre PPU that has been irrigated at any time during the development period, we can take another look at licensing this right. Otherwise, I would need to have the originally amendment sent to the department for licensure. Thanks and let me know if you have any questions.

Scott King of SPF called today to understand where we made the decision described in this email.

I referred him to §42-219(i) and 35.01.g in the rules. I told him that they can send in the original amendment I sent them, ~~so~~ which would override the other amendment, or we would deny the amendment they submitted by order. He will let me know what his clients decide.
