Good Morning Darwin,

Good to hear from you. Yea, as long as Rex feels that it is adequate and the flow can be shut off and locked, then I sounds like that conditions is met. Can you just make sure to get a picture of it for the file?

Thanks,
Craig

Hi Craig! Its been awhile since we crossed paths! I'm working for Steve Peel, and had a question about the locking device required.

The artisian well is a pipe coming to the surface with a valve, set down in the ground a ways as you would for frost protection on your lawn sprinklers. Access is protected with a 6" PVC pipe coming out of the ground. My question is, would one of these satisfy the requirement for a lockable device?

I asked Rex Barrie (watermaster district 63) about it and he said it sounded fine to him, but that I should check with you.

Thanks in advance for your help!
