Hey James,

Permit 29-7391 is pending in the SRBA. We need to issue a license in order for it to move forward. I pulled the file and it looks like there is quite a history on this. To summarize, the Department conducted a field exam and has been on site a couple of times, but the permit holder did not comply with the installation of a measuring device condition. Shelley moved to void the permit in 2001 but the permit holder agreed to install a weir and pay a new field examination fee for the Department to go back out there and verify its installation.

As of 12-20-2001, it appears the ball was in our court to contact the permit holder and conduct an examination to confirm that the weir had been installed. As far as I can tell from the vault file, we have not done so.

I think we need to prioritize this for a filed exam this season not only because we need to move it through the SRBA, but this is really old (application filed in 1979).

Could you put this on your priority list for this season? Or, I can see if I can get someone from the S.O. to go out there. The trick is finding other exams to do in the area to make it worthwhile. I actually don't think the S.O. has any B29 permits to conduct field exams for on our list.

Let me know what you think when you get a chance.

Thanks,

Craig

Craig,

Can you check on this for Ray?

Thanks.

Shelley

Shelley –

I was doing some review in Basin 29 and came across this right. It was recommended to the SRBA Court in the original director's report years back based on permit and has been in limbo. Do you know the status of the licensing process?

If I should be asking somebody else, please point me in the right direction.

Thanks,

Ray
