Subject: measuring device location - Transfer # 77801

Cade,

As we discussed in the recent pre-hearing conference, Big Creek Ranch has agreed to install and maintain a measuring device on their ditch "above the island pasture". This device will be installed in addition to the required control works and measuring device at the head of their ditch from Patterson Creek. The additional measuring device will be installed at the request of the watermaster (Ted O'Neal), in order to proceed with Transfer #77801.

The applicant has provided lat-long data to SPF, from which we have determined the location of the additional measuring device: NWSW, S16, T14N, R22E. We understand this information will be used to craft a condition on the approved transfer which will require installation of the device.

Please let me know if you have any additional questions.
