Jeff,

I don't need it, we just wanted to make sure there was a field exam. If you could get it scanned and in Docs that would be great.

Thanks,
c

Field exam was completed on 6/5/2002 and is in the file. If you need a scanned copy, I would be happy to provide it to you. I have not yet had a chance to review the Field exam and I couldn't tell you if any additional information is needed from further field work. There are relatively detailed diagrams, photos, as well as relevant information in the file, so I doubt any more work would be required to draft a license. Let me know if you have any further questions.

Hi Craig. I peeked at the file here (in Jeff's office) and found a memo from Stanton to Shelley back in 2002. The write-up glitch appears to be determining volume for the uses. I am not sure how they obtained a 1998 hot water permit in the Banbury Hot Springs GWMA, but Shelley's concern was determining a volumetric limit and not a 24/7/365 value.

Jeff is out in the field today so he can weigh in later or tomorrow.

Doug

Doug (& Jeff),

I am not sure if this falls in your jurisdictions but I see your name on Darla's original e-mail so I am bothering you in hopes that you can forward this onto whoever is appropriate.

There is a memo in the backfile 47-16808 (page 21) from Jim Stanton that that confirms a field exam was conducted in 2002 but I can't find any sign of a field examination report. I looked at the "Southern Field Exam List" access file on AS00 common and see Jeff Coopers initials next to the file.

Have you been able to confirm the existence of a field exam? I confirmed that there is no field exam report in file 47-7829. We need to determine if there is a field report, and if there isn't, do we need to conduct another field exam.

Thanks,

c

Subject: WR Permit No. 47-7829

Hello,

I just processed an assignment of permit on the above mentioned water right. The water permit report from info search shows a field examination date of 6/5/2002. The file is in permit status, and there is no field exam located in the physical file. Just thought I should mention it.

☺ Darla

MEMORANDUM

Date: November 29, 2002
To: Water Right File 47-16808
From: jstanton
Re: Comment/Analysis

Per the request of ADM, I have conducted the licensing examination for Permit 47-7829, which covers the existing uses of this well. A flow of 0.83 cfs was measured, which translates into an annual volume of 600.9 acre feet. This is the sustainable yield of this well, which could not be increased without a major reworking of the system. During the exam, I viewe the small pipelines that run thru Salmon Falls Creek to cool the 114-degree water to make it more suitable for some uses. The applicant plans to eliminate these pipelines and to use the extra heat for greenhouses and other unspecified structures to be added to the property. The permit could be approved by limiting the total diversion rate and volume from this well to the amounts mentioned above.
