

MEMORANDUM

Date: June 18, 2012
To: Water Right File 79-7269
From: cpalmer
Re: Licensing memo

PD: The PD consists of groundwater from a well near the home. The well was not in compliance of the well drilling rules and I will check with Rob Whitney to see if this issue has been rectified. No other rights are diverted from this PD.

Update: The right holder has welded an extension to the well head and is now in compliance.

POU: The residence at 118 Gold Rush Lane in Lucille is covered by 4 water rights total as follows:

Right	Source	Rate	Volume
79-7137	spring	0.04	1.2 afa
79-7194 (still permit)	groundwater (tunnel)	0.04	1.2 (as recommended by FE)
79-7269	groundwater (well)	0.04	1.2 afa (as recommended by FE)
79-14082	groundwater (sump)	0.02	0.1 afa

All the rights are diverted from different sources and should all be limited to the standard rate and volume for a home.

BENEFICIAL USE: While the right holder has submitted rights for mining and commercial uses, he had only developed a standard domestic use under the rights.

Phone Conversation Log:

January 27th w/ Tom Lindsey: Tom Lindsey called to discuss the amendment that I sent him for 79-7194. While on the phone he mentioned that he has fixed the well issue and will send in a photo that reflects the work.

6/18/12: I spoke w/ Rob Whitney to confirm the well is now in compliance with our standards. Rob looked at the photo taken by Mr. Lindsey and agrees that the well is now at least 12" from the ground. I will move forward w/ license.
