Cherie,

Permit #8875 is for a well that was drilled on property we bought in the 60s that the water continuously showed contamination with bacteria. We moved east about 100 yds and redrilled it last fall under well tag #0060601 , drilled by DIRT WORKS Company. The original well has been abandoned.

Permit # 21400 is the municipal well for the town of Picabo.

I will look up the pumping equipment that is in both wells.

See you Wednesday
Nick Purdy

Nick,

Thank you for your time today. I faxed the documents we discussed on the phone today and I wasn't sure they were transmitted completely so I have attached them to this email as well. I look forward to meeting you 8:30 at the Silver Creek Convenient store next Wednesday. At the time of the field exam, I will need to access the wells that are associated with the water permits and will need to make measurements, if possible. If you have any information regarding those wells such as what type and make the motor and pumps are, that would be helpful. Thank you and see you next week.
