I have no problems with this request. The water never reaches a point where I have any thing to do with distribution.

Roger,

Michael Merriman, Albion Ranch LLC, has written the Department requesting we drop the 01H measuring device condition from his permit prior to licensing it. Under current department guidelines, before we can drop the measuring device condition, some form of communication is required from the Watermaster indicating they concur with the proposed waiver. This is a small on-stream impoundment and is on an unnamed stream tributary to Blacksmith Creek which as I understand never actually reaches Cassia Creek and is not actually regulated by Water District 43C. An email from you should suffice to satisfy departments records. One note on this development is the place of use and point of diversion are listed in the NWSE1/4 of Sec. 2, Twp 13s, Rge 25E, when they are actually located in the SWNE1/4 of Sec. 2, and a licensing amendment is pending to correct this error prior to licensing.

Thanks for your time and comments,

Bill Mills
