RE: 65-23160, 65-23279, 65-23380 Points of Diversion

These rights are portions of original right 65-13269 that was in the name of Cheehaole Ranch. Several transfers and ownership changes resulted in these three current records identifying the same two diversion points: original point NWNW Section 16 and added point NESW Section 17. These points are linked to these 3 current records in ArcMap.

Based on written records and GIS information (tax lots, place of use maps etc.), the following conclusions can be supported. Two of the rights only have access to a single diversion point each, while the third right has access to both diversion points.

- Right 65-23160 for Nave can use diversion point NESW Section 17 that is close to the place of use for this right. The other point is far removed from these acres.
- Right 65-23279 for Walker can use diversion point NWNW Section 16 that is close to the place of use for this right. The other point is far removed from these acres.
- Right 65-23380 for Cheehaole Ranch can use both diversion points since the place of use is sufficiently spread out to provide access to those points.

Any additional splits of 65-23380 should be checked to see if a new owner has access to one or both points to avoid continued confusion in the records.

Any subsequent water right filings for 65-23160 or 65-23279 would allow similar corrections to be made.

Database comments in this regard were added to the records today.
