Re: Permit to Appropriate Water No. 15-07275

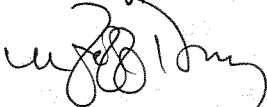

Dear Shelley,

In an attempt to be compliant with the conditions of approval listed on permit no. 15-07275, I am writing you to report diversions of water and/or other pertinent hydrologic and system information as required by Section 42-701, Idaho Code.

At the point of diversion in section 34, Twp15S, Rge 35E, B.M. Oneida County, a small catch/sediment pond has been constructed outside the natural stream channel, about 12 feet wide by 24 feet long and approximately 4 feet deep. From this structure, via a 1 1/2 inch pipe and a 2 inch pipe, both black poly in nature, water is conducted for sprinkle and drip line irrigation of approximately 10 acres enrolled in the Continuous Conservation Reserve Program (CCRP) in sections 34 and 27. In these acreages, the water is appropriated to support conservation practices to reduce soil erosion, improve water and soil quality and provide wildlife habitat and food sources. Furthermore, water is also conducted via these two pipelines into section 27 where a gravity fed 3 inch aluminum hand line irrigation system is employed to irrigate approximately 10 acres of cultivated small grain crops. Digital water flow meters have been procured to measure water use under this appropriation permit. In the springtime, these devices are installed in the two pipelines at the points of egress from the catch/sediment pond, and then removed in the fall to prevent damage from exposure to the winter elements. In the year of 2008, water use was calculated to be 1, 965, 600 gallons.

Should you have questions regarding this information, please contact me at your earliest convenience at (719) 290-2988.

Sincerely,

M. Jeffrey Davis
