Hi Jennifer,

As my earlier email said, thanks again for looking at the Sutton rental application for me. As I am writing the approvals, I have one more question. As you know, we are looking at renting 22-7336 for the irrigation use, but to satisfy the mitigation requirement, I'll have to use 22-13994, which is in a different location. It occurs to me there might be some issue with timing/location to use 22-13994 for the mitigation requirement. What do I need to know about that? Can you illuminate? Thanks.

Monica

Monica,

The analysis for the amended application shows a peak trimester depletion at Heise to Shelley of 19.9 AF, down from 34.5 AF for the original application. Transfer spreadsheets are attached for both spring/summer use and year-round use (the "smoothed" version). An amended memo is also attached. Let me know if you have any questions or comments.

Thanks,
Jennifer

Hi Jennifer,

Thanks for the call so quickly. This is a modification of the previous memo sent in January. If you have any questions, let me know. Thanks once again.

Monica
