

MEMORANDUM

Date: May 02, 2012
To: Water Right File 33-7191
From: dcarlson
Re: Field Report Narrative

Well/pump to sprinklers. POD overlap with 33-7010. Combined limit of 2.33 cfs added to license. This is for an additional 67 acres of groundwater irrigation.

The field examiner recommended less acres than what will be licensed. At that time of the exam, the field examiner did not have the benefit of ArcMap or the completed SRBA recommendations for all the overlapping water rights.

Using aerial photography from 1992 and then subtracting the place of use for all the Little Lost River surface rights and the place of use for groundwater rights 33-7010 and 33-2096, there were still at least 67 acres not covered by any other water rights. License should be issued for the full 67 acres as permitted with no place of use overlap with surface water or groundwater rights.

Since the time of the field exam, the delivery system has changed. Water can now be delivered to any of the irrigated acres from any of the sources. A transfer application has been filed by Ross. Transfer will be processed after the license is issued. It will rearrange the places of use for all of the water rights on the property to reflect the current irrigation practices.
