Dear Mr. Carlson--

I am writing to request some of your time and any assistance you may be able to provide with regard to the following:

For the Bureau of Land Management (Charles Morton) to initiate a request for an easement with the U.S. Forest Service, and a water right from the IDWR, the BLM is requesting that I contact you for guidance and assistance in determining if a change can be made by the IDWR to recognize the upper diversion for Lone Cedar Ranch, Mackay, Idaho. The IDWR currently only records that the lower collection dam as the main point of diversion, and does not show the upper diversion which is used to divert water to the collection dam.

The collection dam location is:

44°02'29.85"N

113°44' 51.21"W

The Upper diversion location is:

44°02'33.15"N

113°44'46.59"W

POD

Please see attached for specific detail regarding current maps, GPS coordinates, and planned water routing to be undertaken by the BLM.

Should you need or desire to discuss the specifics of this request, either with Mr. Morton or with me, please feel to contact either of us as you deem necessary.

Very Cordially,

Gordon Lundy

Dave,

I gave Gordon Lundy your name. The issue with this water right is that IDWR has the POD recorded on the Map where the bubbler to the pipeline is not where the actual ditch diverts from the stream. The Master title Plat Shows the ditch beginning upstream. There is a potential that BLM will be applying for a water right on this system, however we are going to want our POD at the beginning of the ditch, not where the bubbler is located. I think he may need to file a transfer to correct the POD because the change results in a change of QQ for the POD. He is the only user on the stream, which sinks about ¼ mile downstream of his diversion.
