Dana,

I reviewed the additional language on the condition for 65-22952 with Craig Saxton. Craig stated that you can cross out "or diversion by other upstream water users," on the amendment for 65-22952, condition #3, and initial it. The amendment can then be signed, and returned with the applicable fee (if one is required) for each water right. Corrections will be shown on the final License. This same procedure can be done on this identical condition, with the amendments that were sent for the following water rights: 65-22949, 65-22951, and 65-22954

An additional point of diversion for 65-22952, in the SENW of section 32, T9N, R5W will not be added, due to the point of diversion being at the check structure location in the NENW (as GPS'd during the field examination). The place of use for stockwater for that stretch is from that check structure in the NENW, all the way down the unnamed ditch into the SENW of section 32. No other check structure/POD was shown or GPS'd at the time of the field examination.

An extension till Monday 3/26/2012 has been approved to allow for review, signing, and returning the Amendments for all of the water rights listed above.

If you have any additional questions, I am in the office this week Monday thru Thursday 5am - 3pm, at (208)287-4920.

Thank you,

Sandy

Subject: Colwell - Water Right No. 65-22952

Sandy:

I noted that the second condition on this Application for Amendment is different that the language we agreed to for 65-22948. I prefer the language on 65-22948. Is this some reason for the change?

Also, could we add a point of diversion location in the SENW of section 32, T9N, R5W, since this is a stockwater right?

We would like a few more days to resolve these issues before signing and returning the Amendment. Will this be ok?

Thank you,
Dana
