Alfalfa reference ET (ET _r) computed by the ASCE standardized Penman-Monteith method using solar radiation and dewpoint estimated from air temperature and wind speed from long term regional stations.											
Actual ET (ET _a) includes soil surface evaporation (from precipitation and irrigation) as well as reductions in evapotranspiration caused by soil water shortage. It is often below Potential ET for rainfed crops. (ET _a = K _s *ET _b + K _e *ET _r)											
Potential ET (ET _p) represents the total estimated evaporation that would occur without soil moisture stress. It includes soil surface evaporation from recorded precipitation and simulated irrigation. (ET _p = ET _b + K _e *ET _r)											
Precipitation deficit (Pdef) or Irrigation water requirement is the difference between ET and the precipitation stored in the root zone and evaporation layer (Przel). During the growing season for irrigated landcovers Pdef = ET _a - Przel and for nonirrigat											
Precipitation residing in root zone is the amount of gross precipitation that infiltrates (less surface runoff) and remains in the root zone for evaporation and transpiration (less deep percolation). (Przel = P - Runoff - DP _{perc})											
Effective precipitation for transpiration is the amount of Przel for use in supplying transpiration by the crop or land use cover. It does not include infiltrated precipitation that is evaporated from the soil evaporation layer (2007 version).											
-NA- indicates that data was missing preventing computation of reference evapotranspiration. For monthly series, it indicates that air temperature data was missing for the entire month. For annual series it indicates that 15 (6) days or more were missing

MEMORANDUM

Date: March 19, 2012
To: Transfer 77523 File
From: Benny Walker
Re: Evaluation of Sufficiency of Information Submitted

Application proposes transferring a 68 acre portion (1.36 cfs) of an irrigation groundwater right from a farm located approximately 4.0 – 4.5 miles north and 3.0 – 3.5 miles west of the center of Jerome to commercial and stockwater use for a CAFO located adjacent to the farm. The transferred portion of this right (1.36 cfs) and an additional existing domestic and stockwater right (0.04 cfs) will be added to three existing commercial and stockwater rights for the CAFO. These five water rights will be diverted from three existing wells and a new well to be drilled at the CAFO site. The irrigation to commercial and stockwater use conversion was based on an acre to volume conversion factor of 2.26 afa/acre. This was based on the University of Idaho 2009 Evapotranspiration and Consumptive Irrigation Water Requirements for Field Corn for Jerome. The applicant submitted 2010 crop records that showed 141.20 acres of corn was grown on the farm. The wells involved with the transfer are located within adjacent model cells of the ESPA model area so a ground water model analysis is not required. Transfer occurs within the jurisdiction of Water District 130 therefore watermaster comments will be solicited.

Water right 36-8054 was split up front into 36-16914, 36-16915 and 36-16916 in preparation for data entry of transfers 77522 and 77523. 36-16914 was included in Transfer 77522 to move 3 acres of irrigation into the CAFO well system. 36-16915 was included in Transfer 77523 converting 68 acres of irrigation to stock/ commercial use. Water right 36-14152 for Domestic/Stockwater is also involved with this Transfer 77523. During the review this water right was found appurtenant to the CAFO facility and the POU and POD needed to be updated to reflect current use. The remaining water right 36-16916 for 44 acres of irrigation left on the farm is included in an additional Transfer 77425.

- **Authority to File:**
The applicant submitted quitclaim deeds for all properties involved with the transfer showing that the applicant owns the rights and the property involved with the application. The signatory of the application is listed with the Secretary of State Business Entities for Millenkamp Properties, LLC. A letter from the current lien holder, Northwest Farm Credit, consenting to the proposed changes was also submitted.
- **Water Right Validity:**
Right 36-16915 was licensed 1/11/2002 and right 36-14152 was decreed 11/22/1996. Recent aerial photos of the area show the CAFO has been in continuous operation. A 2010 FSA report submitted with the application indicates the acres to be dried up were irrigated so forfeiture should not be an issue.
- **Injury to Other Water Rights:**
None anticipated. The rights are within WD130 so measurement and reporting is required and the rights will be under the jurisdiction of the water master of that district.
- **Enlargement of Use:**
None anticipated with proper conditioning and the measuring and reporting requirements.
- **Local Public Interest:**
Application will be subject to public notice and protest.
- **Beneficial Use/Conservation of Water Resources:**
Proposed uses are recognized as beneficial uses of water.

Review of the application finds there is no clear inconsistency with criteria set forth in Section 42-222 Idaho Code preventing processing of this application.

Dear Mr. Funderburg:

Our office is currently processing two water right transfer applications that you submitted on behalf of William J. and Susan Millenkamp. The first transfer proposes converting a 71.0 acre portion of an irrigation right (36-8054) to stockwater and commercial use. The second transfer proposes transferring a 3.0 acre portion of the same right to irrigate around a home and berms. During my review of these applications there are a couple of items discovered that need to be addressed in order for the Department to continue processing the applications...

Additional water rights: During my research of water rights for the properties of the CAFO I discovered a water right (36-14152) in the Name of William and Judith Braun that appears to belong to Millenkamp Properties, LLC. I have drafted a change to add the stockwater portion of this water right to the CAFO facility and the domestic portion to the home. Enclosed is a new form describing the changes and a map showing the proposed place of use for the domestic water right. I need signatures and dates approving the changes on both the new form and the map. Also I found a domestic water right (36-14536) in the name of Lon A. and Nancy Thompson associated with a home on the Northwest side of the CAFO. I have included an ownership change to change this water right into the name of Millenkamp Properties, LLC. In addition a \$50.00 fee is required to change both these water rights (36-14152 and 36-14536) into the name of Millenkamp Properties, LLC.

Deeds: The deeds submitted with the applications excludes the area of the home where 1.5 acres of irrigation is proposed to be transferred. A deed for the home is needed to be able to transfer the 1.5 acres of irrigation for the area around the home. In addition if the deed for the home is in a name other than Millenkamp Properties, LLC we need a statement from the deeded owners allowing Millenkamp Properties, LLC to place their water right on the area surrounding the home and that Millenkamp Properties would retain ownership of the water right.

Sincerely,

Benny Walker
