Re: Phone Conversation

I had a phone conversation with Mr. Allen today (208) 983-2581, to inform him that a letter had been sent to him in reference to the field exam and aerial calculations determining that the pond was >8.0 af. That an application for permit, and an application for enlargement of existing dam form had been mailed to him along with the letter. Mr. Allen stated that he had already filed an application. For some reason when the overlap query was run, it did not show permit 79-14217 (23.50 af), which the proof is not due until October 2014. Mr. Allen stated that the average depth of the pond is 8 ft, and was not sure of the height of the dam but indicated that he thought it might be more than 10 ft in height.
