3/22/12 City of Boise Geothermal

Bob Maynard - City, Kent Johnson - City, Jeff P, Bob Sutter - BWSWD, Harriet Hensley - AG, Garrick, Charlie Honsinger - Tertling, Pat C - BWSWD, John Tensen - City, Norm Young - Edwards, Bruce Smith - BWSWD, Ken N.

Ken Neeley provided an update on monitoring, 6% higher withdrawals - no negative impacts, no indication of problems

Harriet - increase in unaccounted for water?
Kent + John - basically a metering issue, within measurement accuracy.

City report - ave. of last 2 yrs = 210 mm/yr
add 40 per agreement = 250 mm/yr 2012

expect about 246 mm/yr by end of 2012 WY
BSU project ½ done, will increase use in 2013

Charlie - when does licensing occur?
fairness issue
IDWR - is the use essentially municipal based on permit issued prior to muni act including exception of geoth. in muni purpose of use?

if municipal - traditionally no volume
- if not - perhaps development period has passed?

Bob - since moratorium prohibited further development, no limitation pursued on development period and further development limited by agreement.
Agreement is capped @ 310 mmg/yr
no reason to issue license yet.

IDWR will continue to review
Bruce - legal question that IDWR will need to address

Norm - question about timing of new development
City - 2012 will likely be 246 mmg/yr
2013 will be higher when BSU on-line

Charles - attachment demonstrates no need for so many monitoring wells by Tetlow - agreement by group.
Charles will prepare agreement for review + then approval
IDWR - need to respond by order, letter, or just acquiesce?
