Hi Steven,

It's because of the allotment of acre feet to the water right being rented. 02-7065C allowed more volume per acre than the other combination of water rights we had in the previous agreement. Our rental rate is based on volume (\$14/AF), hence the greater volume and the higher rate. Yes, you can pay in March. I've copied Christine Field, who does our administrative work, on this email so she can put the proper note on it so we know you are paying in March.

Subject: Water Rental

Monica,

I was reviewing the information dated October 18, that was signed by Pamela. The rent went up from \$43,960 a year to \$49,994. The irrigated acres are the same, the CFS are the same but the acre feet are different. Why is it different?

We discussed making payment prior to the April 1st due date. This letter also asks for payment within 14 days. Can we pay it in March just prior to the use of the water right?

Thanks,

Steven Tarbet
