4. csaxton 2/14/2012 Purpose of Use

Comment: There are actually 16 domestic uses authorized under this permit. There are 15 "domestic definition A" uses, and 1 "domestic definition B" use. Southshore Subdivision No. 2 consists of 16 lots. Lots 1-15 are buildable lots which 15 homes will be built. Lot 16 is the well lot, or common area, and is where the domestic use described under definition B is used.

5. csaxton 2/14/2012 Volume

Comment: Domestic use is for internal and external use for 15 homes.

Internal volume:

$15 \times 0.6 \text{ AF} = 9 \text{ AF}$

An acre-foot volume has not been assigned to the domestic use for lot 16. Rather it is limited to 2,500 gallons per day.

6. csaxton 2/14/2012 WB7 Condition

Comment: Assuming $\frac{1}{2}$ acre of irrigation for the 15 lots, any supplemental water would be irrigating 7.5 acres. Field headgate requirement for the area is 4.5 af/a. $7.5 \text{ acres} \times 4.5 \text{ af} = 33.8 \text{ AF}$

7. csaxton 2/14/2012 Supplemental Conditions

Comment: The field examiner identified 3 overlapping rights that had been decreed by the SRBA court. However, there are actually 7 partially decreed overlapping rights (63-136, 63-137B, 63-200A, 63-233K, 63-372, 63-2388, 63-26671), and 6 rights pending decree in the SRBA (63-251, 63-301, 63-302, 63-373, 63-2106, 63-2392F).

Because 6 rights are pending in the SRBA yet listing the partially decreed rights would be incomplete, I will not identify the overlapping supplemental rights by water right number within the supplemental conditions.
