Hi Brian,

The source is identified as South Fork of Salmon River (not groundwater/a well), which is seepage from a hole dug that is less than 18 feet deep. No need to send me another map, since it will be explained within the comments.

Sandy

Hi Sandy,

I just wanted to clarify for the record that the water source on the As Built map should be identified as sumps rather than wells since they are less than 18 feet deep. I know we discussed this but it probably should be noted as such on the drawing to be more accurate. Can you make a notation or do you need a new drawing? Thanks

Brian
