Re: Permit Amendment POU

The licensing field exam conducted on July 30, 1996, found that the developed POD was different than that which was permitted for 75-7526. The field examination report did not describe the number of acres that were actually irrigated at that time of the field examination. An application for amendment of permit 75-7526 was solicited to correct the POD location and also listed the full 10 acres originally permitted. The amendment signed permit amendment was received with the required fees on December 8, 2011.

After reviewing the available information in the 1996 examination report, along with available aerial photography, IDWR does not have enough evidence to support that 10 acres of irrigation was developed in accordance with permit 75-7526, within the authorized development period. I sent the permit holder a new amended permit with an updated POU of 4.8 acres and gave the permit holder 30 days to provide additional evidence to support more than 4.8 acres of irrigation was developed.

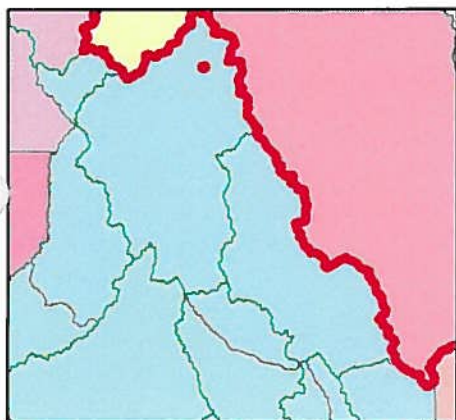

The permit holder did not respond. I think we can still accept the licensing amendment to correct the POD location, but the licensed irrigated acres will need to be different than what was listed on the permit amendment received December 8, 2011. In most cases, IDWR likes to have the permit amendment reflect the license as much as possible, but in this case it cannot.
