Kelly,

That image you sent was very strange. The owner is not interested in reducing the land to accommodate miniature dairy cows.

The attached version does not show that abstraction in the image. None of my images repeat that problem, so I have no explanation...very strange.

Regarding your question of the depth of extracting water..... Based on nearby driller reports, the proposed total depth of 400 to 500 feet is reasonable. Some of the nearby wells begin their perforations near 200 feet, which coincides with the static water level.

For planning purposes, the proposed Lindely well will likely pull water from 200 to 500 feet. I am hopeful that a good water bearing zone can be found 200 to 300 feet and avoid having to drill deeper. Actual field conditions will dictate final well design. Please advertise a depth interval of 200 to 500 feet. Thanks Kelly.

I am finalizing the application review for this right and everything seems to be in order except for one thing.

The application indicates that the well is expected to be from 40 to 500 ft deep however in order to advertize this application the department needs information regarding the proposed depth interval from which the applicant wants to withdraw water.

Would you please provide that interval? Once I receive that information the application will be ready for advertizing.

Thanks,

Kelly
