RE: Phone Conversation with Greg Painter @ IDFG

I spoke with Greg Painter today to clarify the source and PDs for permit 75-7578 as part of the license review. I asked him where the water comes from that goes into the pond. He stated that there's a culvert at the northend of the pond that provides water from a spring only and also a culvert that runs under the road and comes from wastewater and springs. He said the PD on the northend of the pond that comes from a spring only doesn't provide much water and most the time the culvert backs up. He stated the water mostly comes from the water from the wastewater and spring that goes under the road.

I asked him if there is an as-built plan for the pond and he referred to the same plans that are in the application (plans made by USDA-Soil Conservation Service).

Per meeting w/ Shelley Keen & Craig Saxton on 12/22/11, the source should be clarified to be unnamed stream — there's no need to attain a new signed amendment since this is only a clarification.

Since the permit holder didn't apply for wastewater, this right will not authorize the use of wastewater despite the channel carrying the water to the pond may carry wastewater.

This right can be best described as an on-stream pond where the controlling works is at the pond's outlet.
