Subject: RE: FW: Stonegate Subdivision Transfer- PWS Blaine County

Brian-

Per our conversation this morning, I am emailing you to clarify the intent of the Green water right transfer application that was forwarded to you by Corey Skinner at IDWR. Brockway Engineering filed the transfer application on behalf of the Greens.

The applicant's residence is currently served by the Stonegate Subdivision community well distribution system and has been for some time. The applicant has a domestic water right which incorrectly identifies the point of diversion for domestic use and the applicant would like to correct the point of diversion as the existing domestic well on Lot 5, as well as add a point of diversion to their domestic water right (the community well) as the applicant would like to be able to utilize either source. The subdivision HOA has approved the applicant's desire to add the community well as a point of diversion on the applicant's water right. The applicant also seeks to correctly identify the place of use for the domestic water right as Lot 5, Stonegate Subdivision.

The applicant does not seek to co-mingle water from the community well and the existing domestic well on Lot 5, and the transfer application does not seek to do so. The applicant does not seek to, nor has the applicant comingled water from both wells (as of the date of this email) because the applicant is already connected to and served by the community system. The domestic well may serve as an irrigation supply at the residence.

Per our conversation, I believe you understand the intent of the IDWR transfer application and IDEQ will not need to review any plans or specifications of the applicant's because the two wells are not co-mingled.

I apologize for the mis-understanding, I was under the impression that IDWR understood the intent of the application. Thanks for your time.

Subject: FW: Stonegate Subdivision Transfer - PWS Blaine County

Hello Gentlemen, It has come to our attention that the Stonegate subdivision located in Blaine county is planning to amend their water system by including a second source which is currently designated as a domestic system.

As you are already aware, traditional evaluations relating to well siting, source construction, WQ and connection need to be conducted before the system may make the interconnection and use the source.

Our records indicate that the Stonegate Subdivision is under District Health authority. Resultantly, if either of you require assistance please let us know.

I am attaching the water transfer information from IDWR for your immediate use and convenience.

Brian

Subject: Stonegate Subdivision Transfer

John,

Attached is a scanned copy of a water right transfer application involving the community subdivision well for Stonegate Subdivision (located approximately 4.25 miles north and 0.9 miles west of the center of Ketchum, on the east side of Highway 75). As we discussed on the phone, the application is proposing to utilize the community well that provides water to the subdivision lots and a private well on Lot 5 of the subdivision to provide domestic water to Lot 5 of the subdivision. If DEQ has any comments and/or concerns please respond within 14 days. If you have any further questions, feel free to contact me at your convenience (736-3033).

Thanks,

Corey Skinner

IDWR Staff Engineer
