RE: Points of Diversion Location for License

Date: December 20, 2011

.....

While in review of this right for licensing I found the points of diversion GPS'd by IDEQ were in a different 40 acre tract than what was permitted. I requested a licensing amendment to "move" the points of diversion to the SWNESE, Sec. 1, 6N, 2W. I received a response from the Bonnie Laura Water Corp. along with 2 certified surveys that were completed for the subdivision. These surveys show both the wells that are currently in use to be located within the SENWSE, Sec. 1, 6N, 2W, as permitted. Apparently the subdivision had a survey completed before the drilling of their 3rd well to make sure it would be located in the permitted area. Since the wells are shown on the certified survey we cannot argue that the wells are in another area. Recommend we license this right with the wells as shown on the surveys.
