None take						

2. Measurements: Diameter of orifice was measured at 4 inches. At the time of the exam (8/11/2011) there was no water in the ditch or the fish screen structure. However, 20 inches of head above the center of the orifice to the high water mark on the fish screen structure was measured.

E. FLOW CALCULATIONS

_____ Additional Computation Sheets Attached

Measured Method:

Discharge from a tank through an orifice (see attached 8/24/11 memo for formula and orifice coefficient)

$$Q = C_d A_o (2gh)^{1/2} \quad \text{where } C_d = 0.67 \text{ coefficient of discharge}$$

$A_o = \text{Area of orifice opening}$
 $g = 32.2 \text{ ft per second}^2$
 $h = \text{measured head above center of orifice opening (in feet)}$

Orifice is a 4 inch diameter hole so $A_o = \pi r^2 = \pi (2 \text{ inch})^2 = 12.566 \text{ inch}^2 = .087 \text{ ft}^2$

h was measured at 20 inches (to high water mark) = 1.667 feet

$$Q = (0.67)(0.087)[2(32.2)(1.667)]^{1/2}$$

$$Q = 0.60 \text{ cfs}$$

F. VOLUME CALCULATIONS

1. Volume Calculations for Irrigation:

$$V_{I.R.} = (\text{Acres Irrigated}) \times (\text{Irrigation Requirement}) = \text{N/A}$$

$$V_{D.R.} = [\text{Diversion Rate (cfs)}] \times (\text{Days in Irrigation season}) \times 1.9835 = \text{N/A}$$

$$V = \text{Smaller of } V_{I.R.} \text{ and } V_{D.R.} = \text{N/A}$$

2. Volume Calculations for Other Uses:

$$V = [\text{Diversion Rate (cfs)}] \times (\text{Days in Irrigation season}) \times 1.9835 = (0.60 \text{ cfs})(214 \text{ days})(1.9835) = 254.7 \text{ afa}$$

G. NARRATIVE/REMARKS/COMMENTS

Permit 72-16752 was permitted for the diversion of up to 0.80 cfs from Challis Creek for use in a fish screen to flush fish back to the creek that would otherwise be trapped between the point of diversion and the fish screen. During the exam it was observed that water was not being diverted through the fish screen. However, there was a 4 inch diameter orifice where water would flow back to Challis Creek, with 20 inches of head above the center of the orifice to the high water mark on the fish screen structure being measured indicating that water had been utilized by the fish screen bypass in the past. Note that permit 72-16752 was permitted with the wrong irrigation season (04/01/ to 11/01), when the standard for the area is actually 4/01 to 10/31. It is recommended that the standard irrigation season be licensed for the period of use. The standard irrigation season of 214 days was utilized in the annual volume calculations.
