Michele,

I am aware that a measuring device is not now required, thank you. This last memo you sent suggests you are allowing for 900 gals of domestic water per day that being the total of the six rv sights plus irrigation of the .5 acres. You also indicated last week, via email, that the 6 rv sight water permit could be converted to one household use. Does that mean the home would be restricted to 900 gallons per day, which is much different from the 13,000 gpd allowed for a domestic home?

Is the amendment you are referring to the one we received Friday Dec 2 by email. When do you need it back, as I see no deadline indicated? It is clear we are still working through unanswered questions. It is not our intent to be difficult about this, but to understand the license and its use restrictions. Line 3 of the amendment suggests six rv sights at a total of 2.3 acre feet. Line 4 says the permit shall not exceed 13,000gpd. These two numbers are light years apart. Again, which one are you using?
Richard

Richard and Raida Jensen,

Here is another memo that will be scanned into the water right file. I will see that this file's scanning is updated as soon as possible.

For IDWR the acronym AFA is acre-ft per annum

There is NO measuring device required at present for this water right. I do not know and cannot tell you what will be required for a possible, future, measuring device. I can only tell you, again, that the right will be administered by the elements shown on the license. And that you do not have a license for this right.

Your permit must be amended before a license can be issued. That amendment was due last week is delinquent without the signature.

Please take action to remedy the delinquency.

Thank you
Michele Edl

Hi Michele,

Even more confusing!!!! The application for permit calls for 2.3 acre feet. Your memo under calculations calls for 1.42AFA (does AFA mean annual acre feet?) We agreed the application would be for .5 acres and your conclusions show .25 acres. Again, what would you expect to see on a measuring device installed on this system? Is it 1.42 AF, 2.3 AF, or is it 13000 gallon per day?

Richard

Richard and Raida Jensen,

In preparation for issuing licenses I draft licensing review memos which become part of the file's contents. Those memos outline my reasoning for determining the elements of the water right license. And those memos will be scanned into an electronic version of the file which you will be able to query from our website. Typically, the final scanning occurs at issuance of a license. For example the contents of Water right license 29-13155 has been scanned and is available for viewing any time from a internet connected computer. If you need assistance querying our website for that information, please give us a call. Any of the folks assigned to answer office day calls will be happy to guide you.

Right now the scanning for this file is only up to the amendment letter November 18, 2011.

There is no reason why I can't provide you an "early bird" copy of my revised memo and I have attached it to this email.

I hope that will answer most of your questions.

Michele Edl

Subject: RE: Emailing: DOC000.pdf

Hi Michele,

I am trying to make sense of the numbers on the proposed license. The license allows a maximum of 2.3 acre feet of water, the maximum diversion volume. An acre foot of water is 326,000 gallons. That number times 2.3 equals 749,800 gallons. If I take 13,000 gallons per day which the license allows and multiply that by 200 days (the number you proposed) that number is 2,600,000 gallons. The numbers get even more confusing by multiplying the .11cfs the maximum diversion rate. If a measuring device were installed, which number would you be looking for? It seems like these should agree in some manner. I am thinking about going to my local Albertsons and see if their is some cereal box that has the secret encoder ring that will help me understand how this works. In place of the ring I hope you can explain the incongruity.

Should the number of days and the number of people you used to come up with your formula for the rv sight water usage be included in the license? How will anyone ever interpret the method by which you arrived at your numbers, in the future. Might I include the impossibility now. The only thing we have are notes we took during our visits to your office and phone conversations. We need something in writing explaining how this works.

Thanks in advance,

Richard
