Subject: Weir Update

Sandy - The culvert and weir mounting bracket have been installed as of noon today. The water is flowing through the culvert and is beginning to back up. Bill Bedford will measure the water level this afternoon to determine the exact height of the weir plate. Bill will finish the weir plate and fit it in place. I'm sure everyone involved is as happy as I am that this project is close to completion. I will contact you the minute it is done,

Thanks

Craig Collins
