

MEMORANDUM

Date: November 17, 2011
To: Water Right File 29-7866
From: Michele Edl
Re: POD and POU

I met with Raida and Richard Jensen today.

We discussed elements of three water rights in Harkness Canyon: 29-7866, 29-13155, and 29-13784.

POD

Licensed right 29-7866 lists three points-of-diversion, representing 3 different springs. One point of diversion in SWSWNW is on forest service property and there had been an agreement in place to access that spring. That spring is labeled Upper Spring on the field exam map. It is the only spring actually used by right 29-7866. The other two springs have been developed but they are not serving as the points-of-diversion for any water right. At this time, water collected from them simply overflows from each diversion pipe into Harkness Creek.

Water Right 29-7866 does not share the diversion and distribution piping that are shared by 29-13155 and 29-13784.

POU

The domestic place-of-use for 29-7866 includes an upper campground in the NWSWSW and a separate, irrigated tree area which straddles 3 section corners: the NENE of T9S R37E sec 4, the SWSW of T8S R37E sec 34 and the SESE of T8S R37E sec 33. The shapefile associated with that irrigated tree area did not represent the true shape. The Jensens provided information which I used to modify the shapefile to more accurately depict that irrigated area.
