

## MEMORANDUM

**Date:** March 04, 2008  
**To:** Water Right File 63-10034  
**From:** medl  
**Re:** license review

---

Based on the recommendations made by Daniel Nelson, this water right is irrigation use only. I deleted the industrial use.

I created the POUs referring to the field exam notes and 1987? SIDS aerial photography.

If the wells can be discharged directly into the waste water recovery system, then the points of diversion may not be the well locations.

The question is whether water was ever taken directly from the pumps to the fields without ever going through the plant. Is this water used for irrigation with co-incident potato processing? Or would the fields dry up if the plant closed?

I sent Vic Conrad an email 1/29/2008 but it bounced back.
