Subject: Permit 63-10034 - Simplot

Hi, Michele.

I had a meeting with Vic Conrad yesterday regarding claims filed in the SRBA and during our conversation we briefly discussed Permit 63-10034. I told him you would be trying to license this permit in the near future and he agreed that would be best considering the Special Master and Judge don't like to decree permits. In regard to Carter's exam: Vic agrees with everything except for deletion of the industrial use. Waste water from the processing plant is injected into several streams that deliver water to their irrigated lands. The irrigation component of the permit is for irrigation season only; the plant operates year around so they need some mechanism to be able to apply their waste water onto their land during the non-irrigation season. This is why the permit was filed for both uses. Vic says if we could license a year round irrigation use, the industrial component could be removed; however, it may be easier to leave the industrial use on and make a comment about it being used for land application of waste water. He doesn't want any additional water for use in the plant but does need to be able to spread the waste water during non-irrigation season. This is all addressed in Admin Memo #61 if you have questions about land application of waste water. Hope this makes sense, if not, please let me know. Thanks. Kay
