Emalee,

The issue is that they claimed a total annual diversion volume of 0.15 acre feet for both the stockwater and irrigation uses. And since they are diverting up to 0.34 cfs for irrigation and/or stockwater, they will reach their annual diversion volume limit in about 5 hours.

I thought the question was the stockwater diversion rate?

Emalee,

I am sorry I let this one linger so long. IDWR recommended exactly what was claimed. Therefore, the claimant will need to file a motion to set aside the partial decree and amend the claim to remove the volume limit.

I have an ownership change which will split this right. Last year I noticed that the stockwater portion may have an error on the decree. I can't see that any action to correct this has been taken.

Can you please have someone follow-up on this? I will hold it for another 6 months .

Thanks!
Emalee
