Craig,

I agree with the locations of the wells as shown on the map. I also concur with the identification of the wells as you described them in your email.

Thanks for your help and prompt assistance on this issue.

Hey David,

I looked at the GPS well locations that Nick Van Dyke collected on his field visit and they agree with your map which puts all three wells in the NWNENW of S21. Then I spoke with my supervisor, Shelley Keen, and he agreed that an amendment was not needed since it was clear in the final order that the proposed use was to be from three wells.

So, just toss all that stuff I sent you and I will move forward to issuing the license.

Here is a map of the points of diversion as I have them. I thought since we are on the subject, I would just confirm the locations with you. The other question I had is how you identify these wells. In other words, the beneficial use field examination from Brockway identifies them as wells 2, 3, and 4. Since Brockway's map doesn't fit the location, could you tell me which well is which according to your naming system. I will note that in the database. This isn't anything that will show up on the license or affect your water right. Right now I have:

The Northern most well identified as Well #2
The western most well identified as Well #3
And the southern most well as Well #4

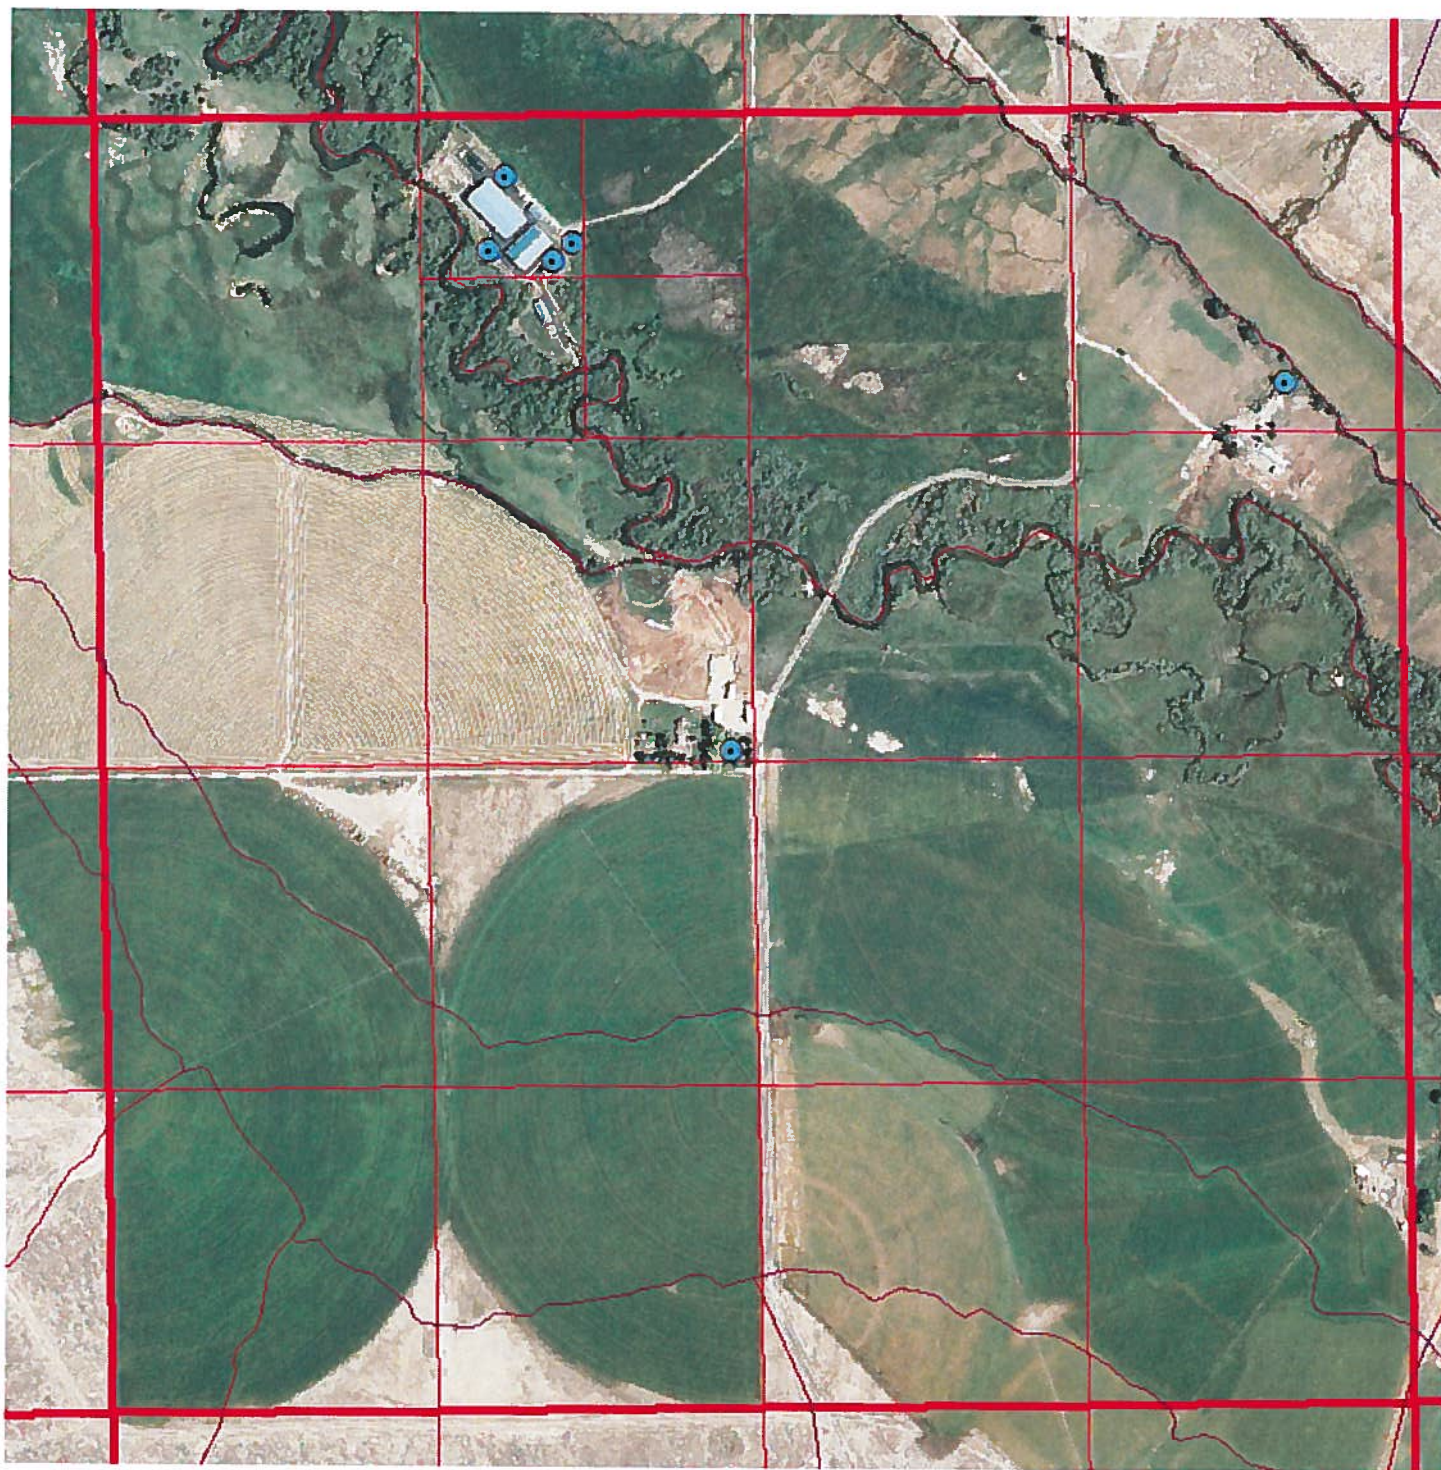

I have also attached a draft of the license that I will recommend for signature. It should be pretty much the same as the amendment I sent you, only with the well locations updated and I changed a typo in condition #1.

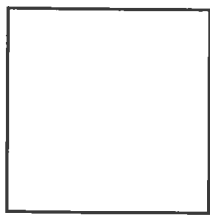

Thanks for your help with this.

Craig
