Water Rights Permit Application

11. This application is for an existing small pond located at 1110 Orchard Loop in Troy, ID that was constructed with USDA funding support in the late 1970's for wildlife use. The pond is fed by diffuse flow and a seasonally wet seep where the pond has been cut into the side of a hill, but the seep typically dries up in May or June. The pond dam is 9' high, and the surface area of the pond when full is approximately 3600 ft². Average depth of the pond is 6'. There is a gravity fed irrigation line that originates in the bottom of the pond and feeds to spigots that are used to irrigate a lawn and flower bed roughly 25' x 75'. In addition to irrigation use, the pond is used for irrigation storage, fire protection, wildlife and aesthetic values. It is unclear whether a permit is needed for the pond given the diffuse inflow, but we're currently in the process of selling the property, and potential buyers have raised the question about water use permitting, so we're applying for a permit in order to resolve any issues that buyers might have.
