Subject: George & Jeri Soulier Permit # 67- 14610
Attachments: IMG_4133.JPG; IMG_4137.JPG

Darla,

On September 26, 2011 I was contacted by George & Jeri Soulier of Weiser in reference to their permit (67-14160). They said the Department had advised them to contact me about waiving the requirement of a measuring device and lockable diverting works. On October 1, 2011 I met with Mr. Soulier at his house and we looked at the water source, pond inlet, and outlet. The source of the water is a spring which, prior to the construction of the pond, ran along the hills and pooled in a patch of cattails. They built the pond and installed a slidegate at the outlet to control the release of the water. After looking over the site I feel that at this time the Department should waive the requirement of a measuring device and lockable diverting works. I also feel that the right should be conditioned so that the measuring device and lockable diversion may be required at a future date should it become necessary. Attached to this email you'll find a couple of the pictures I took. The first is of the pond taken from the inlet. The second shows the path the spring used to take. The green at the base of the hill in the background is the cattails patch. If you need anything else please let me know.

Thank you,

Brandi Horton
