RE: Permit 75-13989

Dear Permit Holders:

The Department of Water Resources (IDWR) is in the process of reviewing the above-mentioned permit for licensure. As part of the review, IDWR evaluates the extent of beneficial use that had taken place during the development period. In the case of permit 75-13989, the development period occurred from July 5, 2001 to June 15, 2006 and the beneficial uses that could be developed are domestic and stockwater uses. A field examiner of IDWR visited the place of use for permit 75-13989 on August 28, 2008 and found 1 home and the irrigation of ½ acre surrounding the home; however, the permit does not authorize the irrigation of lawn. In addition, county taxlot datum indicates that the home associated with this permit was built in 2008, which is outside of the development period.

At this time IDWR is giving you the opportunity to provide information pertaining to the water use pursuant to your permit during the development period. In your response be sure to list specific water uses and include what type of home, if any, that was on the property during the development period and the number of stock and what type were on the property as well. Please provide supporting documentation that substantiates your claims. If you can prove that water was used pursuant to your permit during the development period, the Department will require an amendment of permit since it appears that the place of use and point of diversion had been developed in a different legal description than permitted and will be advertised in your local paper.

Please submit the requested information within 30 days. If IDWR does not receive a response within 30 days your permit may become voided and a new application for permit would have to be filed to cover the current water usage from the spring.

Please contact me at (208) 287-4944 if you have any questions regarding this matter.

Sincerely,

Cherie Padilla, Sr. Water Resource Agent
Water Allocation Bureau
