

MEMORANDUM

Date: August 22, 2011
To: Water Right File 79-7262
From: shemenway
Re: Additional Information

In a phone conversation today with Mr. Desa, he confirmed the physical address, and new mailing address (23213 239th Place SE, Maple Valley, WA 98038), he said he would send in an address change (which was received on 8/30/2011).

Mr. Desa described the location of the spring as being by a tall cherry tree about 300 ft northwest of the well. That the well is located over by a large pine tree. That the spring is no longer visible from the surface since it was developed by digging an area out and filling it with gravel to collect the water into buried 4 inch PVC that runs to the 1200 gallon storage tank, with a 1 Hp sump pump (1 inch discharge to 1 inch buried ABS pipe, to the one frost-free hydrant; the other hydrant is for the groundwater source).

That the storage tank has a 4 inch overflow that discharges to 4 inch buried PVC that runs down the hill to the pond. Mr. Desa also stated that the source has never been an unnamed stream, and has always been a spring. That domestic use is for his plum and cherry trees, grapes, and immediate grassed area around the house. That he hooks up a hose to the hydrant, and uses various sizes of sprinkler nozzles.

Mr. Desa stated that the last time the system was used was 8/20/2011, when he was at the residence on vacation.
