

MEMORANDUM

Date: September 19, 2011
To: Water Right File 79-7271
From: shemenway
Re: Conditions and Legal Description, For Clarification Purposes

Condition 029:

Since the pond was built on the unnamed stream, and there is now an 8 ft dam and concrete barrier instead of a continuous stream of water, it would now be unlikely for fish to continue up stream at this point. The overflow of the pond goes through the spillway, over the side of the dam, and drops into a 12 inch culvert that goes under the road, with flow continuing down to the Salmon River. Since there is now an 8 ft dam and concrete barriers, not having a screen is no longer an issue, but per Shelley Keen, leave condition 029 on the license.

Legal Description:

On the permit, the legal description for the POD included the QQQ, which is required for springs, but not for surface water. For this reason, the legal description for the POD will be designated by the QQ for licensing.
