Re: POD Location

The application for permit submitted by Alfred Holden indicated the POD location as in the SESWSW. The approved permit was for L8(SE1/4SW1/4SW1/4). Arc Map shows (2) segments both side by side as SWSW (this is common along rivers). Arc Map confirms the GPSd location as being in the L8(SWSWSW). Per management the intent of the original survey plat is that government lot 8 extends to the edge of the river. In a phone conversation with Alfred on 8/31/2011, he stated that this has always been the location for the POD (right there slightly under the bridge). He also stated that his warranty deed shows the entire property as being govt. lot 8 SWSW. At first glance at the map he submitted with his application, it would look like the POD would be located in the SESWSW, but there are really (2) complete segments of the SWSW. Per management, since normally springs are listed to the quarter-quarter-quarter designation, the POD for this license will be listed as L8(SWSW), which will not require an amendment to license.
