Subject: Pipe

Dear Carol MacGregor,

Today I received a phone call from Joan Pancheri. She received the Department's correspondence regarding the installation of pipe so you can provide water to their property in the event injury were to occur. She was concerned because, per the drawing, the pipe stops at the fence line and she states that her point of diversion is on the other side of the fence. The Department is not going to get involved with the installation of the pipe but, I do want to remind you that the pipe should be laid so water can be directly delivered to their water rights as stated in condition #9 of permit 65-13912. If, during the field examination, the department finds that any condition of approval has not been fully met the department may void your permit. Please make sure that the pipe is installed so that condition #9 is met. At the field exam it will be determined if the pipe has been installed in a manner that will fully satisfy condition #9 in addition to all conditions of approval on your permit. If you have any questions regarding this matter let me know.
