REF: Phone conversation with Norm Young/ERO, involving questions on T75446

In a phone conversation today with Norm Young/ERO, we went over some concerns found with T75446:

- (1) The Adjudication Recommendation for 63-2812 was for 61.0 acres, not 70.0 acres as was listed on the Application for Transfer.
- (2) There were no maps included with the application indicating where the unchanged acres were located for both 63-2812 and 63-10438.
- (3) In the Application for Transfer, the Warranty Deed and Assignment for Permit for 63-11714 were included, but on the application were not referenced (the PPU included the POU that was shown for 63-11714).
- (4) Also, in the Field Exam notes for 63-11714 (E. Narrative, #12) it references transferring well #4. So, I asked Norm if this well was supposed to have been included with T75446.
- (5) If an Amendment to the Transfer was to be submitted, it would need to be submitted on the 10/2009 revised form.

Norm Young said he would contact his client, to see what they want to do with this transfer, since in any case they will need to submit an amendment for the acreage listed on 63-2812, and submit maps for the location of the remaining acreage for both 63-10438, and 63-2812. Norm said he probably wouldn't be able to get back with me until sometime next week.

Norm stated that Paul Drury is no longer the consultant handling this transfer that he now is working for the Bureau of Rec. as of 1 month ago.
