Sandy,

It has been confirmed. Water right 63-2812 is actually a primary water right. There is no Wilder Irrigation District water on this property. Therefore, it is a primary water right. That makes things much easier.

Dan,

It is as I assumed, there is no district water right for this property!

Tim

Hello Tim,

Here is the map showing the water right borders involved in the Water Supply Bank lease and Water Right transfer. The Water Supply Bank lease and the water right transfer will affect the Wilder Irrigation District water rights at all. This ground water right is used with Wilder Irrigation District water rights, but we don't know if all of this ground under water right is covered with Wilder Irrigation District shares or not. We are looking at approximately 61 acres.

I would appreciate any help you can give me.

Thank you.
