Draft Lic.pdf

Order doc.pdf

Gentlemen,

Here are :

- The draft license for 37-8388 (SDRTR, LLC)
- an order which will be sent out of this office next week
- and a copy of my licensing review memo. The latest additions to the file will not be scanned until sometime next week.

Shelley Keen has briefly reviewed the file and corrected my thinking in some areas. He posed a question I was not able to answer in spite of our numerous exchanges.

It is not clear if this diversion is capable of being controlled by the watermaster. Condition 1 e. of the permit required a measuring device and lockable controlling works be installed. File photographs show a measuring device in place but I don't have confirmation that the required watermaster controls are in place. So I am forwarding that question on to you. This diversion is in Water District No. 37. Have the lockable controlling works been installed? Or has the watermaster exempted this right from the requirement for lockable controls?

Shelley Keen will be out of the office until next Thursday. The Department would probably not issue a license until sometime after he returns.

Respectfully,

Michele Edl, associate engineer
