BENEFICIAL USE FIELD REPORT

RECEIVED

Department of Water Resources

A. GENERAL INFORMATION

Permit No. 36-07741

1. Owner: Buckeye Farms, Inc. Phone No. (208) 837-6595

Current Address: 18335 U.S. Highway 30, Hagerman, Idaho 83332

2. Accompanied by: Dan Yore EXAM DATE: 1-28-97

Address: same as above Phone No. same as above

Relationship to Permit Holder: Farm and Hunt Club Manager

3. Source: RILEY CREEK tributary to SNAKE RIVER

RECEIVED

JUL 02 2001

Department of Water Resources

B. OVERLAP REVIEW

- Other water rights with the same place of use: SEE ATTACHED LIST
- Other water rights with the same point of diversion: SEE ATTACHED LIST

C. DIVERSION AND DELIVERY SYSTEM

1. Point(s) of Diversion:

Ident No.	Govt. Lot	¼	¼	¼	Sec.	Twp.	Rge.	County	Method of Determination
P/D FOR HUNT DITCH RILEY CREEK	6		S W	N E	1	8S	13E	TWIN FALLS	Visual inspection and the use of ASCS aerial photos and USGS Quadrangle maps and Global Satellite Positioning (GPS) transferred into Arcview.

2. Place(s) of Use:

Indicate Method of Determination SAME AS POINT OF DIVERSION

D. FLOW MEASUREMENTS

1.

Measurement Equipment	Type	Make	Model No.	Serial No.	Size	Calib. Date
WEIRS						

2. Measurements: Weirs were used in the field exam calculations. Also the water management measurement report form with sluice gate and rating table was used to calculate the flows of Riley Creek through the Hunt Ditch.

E. NARRATIVE/REMARKS/COMMENTS

The water delivered the ponds on the Buckeye Farm is diverted from 3 sources at 4 different points. There are 4 water rights for the wildlife ponds and 4 water rights for the two fish hatcheries. All of the water is co-mingled; there will be one narrative for all 8 water rights. The first point of diversion for the farm is from Weatherby Springs located in the NESW S30 T 7S R14E. The water from the springs is diverted down the channel through a fish hatchery owned by a neighbor. At the end of the fish hatchery is a weir used to determine the flow going to the Curren Ditch and to Buckeye Farms. This weir is marked on the map as M=11. The water is then transported through the Bar S Ditch and a pipe to the Curren Ditch where it co-mingles with Billingsley Creek water. The second point of diversion is where the Curren Ditch is diverted from Billingsley Creek in the NESW S30 T 7S R14E. There is a weir at this point also and a measurement was made. The Curren Ditch measurement of Billingsley Creek water is marked on the map as M=12. The water travels west down the Curren Ditch to the point where it joins with the Weatherby Springs water. The ditch then continues traveling west to the Buckeye Farms diversion. The ditch splits at this point with a portion of the water traveling northwest through a pipe to other users or continuing west through the Buckeye Farms pipeline. Weirs are installed on both head gates at this diversion. This point is marked as M=13 on the map. All of the water from Weatherby Springs and Billingsley Creek that is run through the Curren Ditch is called Curren Ditch water.

The Buckeye Farms pipe (known as the Curren Pipe) continues west until it reaches the Northeast corner of Section 35 T 7S R13E. At this point the pipe elbows and travels southwest to pond number 1 where it open discharges into the pond. A measurement was made on the Curren Pipeline between where it elbows and Pond 1. This measurement point is marked on the map as M=14. The water in pond 1 can be diverted east through 2 irrigation ditches, south to the Hunt Ditch, North to Pond 2, or Northwest to Pond 20. The ditch that travels north to Pond 2 feeds pond 2, pond 3 and Pond 4. Any remaining water is wasted to the Wildlife Management Area to the east of the farm. The ditch that travels Northwest to Pond 20 can divert into Pond 20 or go through a ditch that travels south to Pond 5.

The water can leave pond 5 through 3 ditches. The first ditch out of Pond 5 travels south to Pond 25, which discharges, directly into the Hunt Ditch. The second ditch out of Pond 5 travels southwest out of Pond 5 to Pond 21 and then to Pond 22. Water in Pond 22 is discharged into 2 ditches. The first ditch travels south into Pond 23 and then down to Pond 24 and then to Pond 25, which diverts into the Hunt Ditch. The second ditch also travels south, but goes directly into Pond 24 and then Pond 25. This ditch also has a second ditch on it that diverts water to Pond 26 that also discharges into Hunt Ditch or North into a ditch that delivers water to the northend ponds or back into the Hunt Ditch. The third ditch out of Pond 5 travels due west. This ditch feeds all of the Northend ponds through a series of ditches. The Northend Ponds include Ponds 6 through 20. Any excess water diverted through the Northend Ponds is diverted back into the main ditch delivering water to Pond 5. All of the water that is run through Ponds 1 through 26 is discharged into the Hunt Ditch.

The Hunt Ditch is diverted from Riley Creek in the SWNE Lt6 S1 T8S R13E. The hunt ditch then travels west to Pond 26. Two ditches from Pond 1 and Pond 25 divert into the pond in the stretch from the point of diversion to Pond 26. At Pond 26 there is a headgate that can divert water from the Hunt Ditch into Pond 26. I measured the amount of water being diverted at this point and it is marked on the map as M=9. The water in Pond 26 can divert back into the Hunt Ditch at the other end of the pond or be diverted into a ditch that travels north to the Northend Ponds. The point where water is diverted back into the Hunt Ditch from Pond 26 was also measured and is marked as M=8 on the map. Once the water passes Pond 26 it flows southwest to the Hunt Ditch Fish Hatchery. All of the water from the Curren Ditch and the Hunt Ditch flows into this hatchery. The water flowing through the hatchery was also measured. At the hatchery the water is either diverted through the hatchery to Pond 27 or is routed through an overflow ditch to Pond 27 or Pond 28. The water diverted through the hatchery can either be diverted into Ponds 27 through 38, known as the Southend Ponds or it can be diverted through the Hunt Ditch to the Hunt/Buckeye Fish hatchery. The water in the Southend Ponds is discharged into the river through either Pond 36 or Pond 37. After

the Hunt Ditch leaves the Hunt Ditch Fish Hatchery it travels northwest to the Hunt/Buckeye Fish hatchery. There is a ditch between the two fish hatchery that does allow water from the Northend Ponds to flow into the Hunt Ditch, but this ditch was dry during my field exam. There is also another diversion between the two fish hatcheries that diverts water into Southend Ponds through Pond 34. At the Hunt/Buckeye Fish hatchery the water is either diverted through the raceways or through an overflow ditch to Pond 34. The water from the Hunt/Buckeye Fish hatchery is then diverted through a ditch that feeds ponds 38 through 45, also known as the Middle Ponds. Water from the Middle ponds is diverted into the Snake River through Ponds 45 and 39. The water in Pond 38 does connect to Pond 35, which diverts into Ponds 36 and 37. Billingsley Creek

water is also diverted through the Buckeye Ditch in the SENE S11 T 13S R 7E. It then flows south through the City of Hagerman supplying water to multiple users until it reaches the Buckeye Farm. Once the water enters the Buckeye Farm a portion of the flow is diverted west to supply water to the Northwest Ponds, Ponds 46 through 53. A measurement was made at this point and is marked on the map as M=7. The water in the Northwest ponds discharge into the Snake River through Pond 47 or 46. Water was not being diverted through the discharge ditch at Pond 47 during my field exam. Further down the Buckeye Ditch there is another diversion that allows water to be diverted through the Middle Ponds through Pond 43. The remainder of the water is sent down the Buckeye Ditch where it co-mingles with the Hunt Ditch and Curren Ditch water at the Hunt/Buckeye fish hatchery. Most of the ponds are only filled during the hunting season and the water is released for use in the 2 fish hatcheries. However, the larger ponds are generally kept full year round to supply nesting sites for the ducks and water for the fish in the ponds. Most of the deeper ponds and better-established ponds have been constructed for a private fishery as well as a hunting area for ducks and geese. During the non-hunting season the shallow ponds are dried up and planted with feed for the ducks. Prior to the hunting season these ponds are filled to allow more area for the clubs hunters.

Diagrams of the fish hatcheries have been drawn and are attached to the applications. They are fairly small commercial fish hatcheries.

OVERLAP:

There are numerous water right overlapping each point of diversion and listing each of them would be extremely difficult. Please see the attached POD and POU overlap sheets for the overlapping rights. The main rights associated with the farm are on a separate spreadsheet that is attached to the overlap sheets. These are the rights owned by Buckeye Farms for both their irrigation and wildlife uses. Since most of the overlapping rights are irrigation rights or other user's rights I recommend that the owners of this permit be limited by the amounts shown on the application. These amounts have been established through many hearings and conflicts and the rates should be maintained.

Have the conditions of permit approval been met? ☒ yes ☐ no

F. FLOW CALCULATIONS

YES Additional Computation Sheets Attached

WATER MEASURED DURING FIELD EXAM = 48.68 CFS (SEE ATTACHED SHEET)

1995 Water Measurement Report = 29 cfs (SEE ATTACHED SHEETS)

PLEASE NOTE: The diversion rate is limited by the amount applied for by the permit of 24 cfs

G. VOLUME CALCULATIONS

1. Volume Calculations for Irrigation:

 $V_{I.R.} = (\text{Acres Irrigated}) \times (\text{Irrigation Requirement}) =$ _____ $V_{D.R.} = [\text{Diversion Rate (cfs)}] \times (\text{Days in Irrigation Season}) \times 1.9835 =$ _____ $V = \text{Smaller of } V_{I.R.} \text{ and } V_{D.R.} =$ _____

RECOMMENDATIONS:

I recommend that this permit be licensed under the following conditions:

1. That it is licensed for 24-cfs diversion rate.
2. A measuring device be installed and maintained before and after the hatchery.

CALCULATIONS FOR CONSUMPTIVE USE:

I was asked to calculate the total consumptive use for this system. In order to do this I measured the total amount of water flowing into the Snake River (M=1 through M=6). I then subtracted the amount of water leaving the property from the amount of water being diverted onto the property. This would give a total consumptive use from all of the sources. The amount of water consumed by each source was calculated by multiplying each diversion by the percent of water that was consumed through the farm.

Weatherby Springs diversion through Curren Ditch	=	2.85 cfs
Billingsley Creek through Curren Ditch	=	20.78 cfs
Riley Creek through Hunt Ditch	=	48.68 cfs
<u>Billingsley Creek Through Buckeye Ditch</u>	=	<u>18.69 cfs</u>
TOTAL DIVERSION INTO BUCKEYE FARMS	=	91.00 cfs

M=1 Discharge into the river	=	3.65 cfs
M=2 Discharge into the river	=	7.02 cfs
M=3 Discharge into the river	=	15.74 cfs
M=4 Discharge into the river	=	16.85 cfs
M=5 Discharge into the river	=	17.95 cfs
<u>M=6 Discharge into the river</u>	=	<u>5.35 cfs</u>
TOTAL DISCHARGE OUT OF BUCKEYE FARMS	=	66.56 CFS

PERCENTAGE OF WATER CONSUMED ON THE FARM:

$91.00 \text{ CFS} - 66.56 \text{ CFS} = 24.44 \text{ CFS} / 91.00 \times 100 \text{ OR } 26.9 \% \text{ DIVERTED CONSUMPTIVELY USED.}$

Weatherby Springs diversion through Curren Ditch Consumed	=	$2.85 \text{ cfs} \times .269 = 0.77 \text{ cfs}$
Billingsley Creek through Curren Ditch	=	$20.78 \text{ cfs} \times .269 = 5.59 \text{ cfs Consumed}$
Riley Creek through Hunt Ditch	=	$48.68 \text{ cfs} \times .269 = 13.09 \text{ cfs Consumed}$
Billingsley Creek Through Buckeye Ditch	=	$18.69 \text{ cfs} \times .269 = 5.03 \text{ cfs Consumed}$

TOTAL CFS FOR EACH MEASUREMENT

MEASUREMENT # 1	-----	3.65 CFS
MEASUREMENT # 2	-----	7.02 CFS
MEASUREMENT # 3	-----	15.74 CFS
MEASUREMENT # 4	-----	16.85 CFS
MEASUREMENT # 5	-----	17.95 CFS
MEASUREMENT # 6	-----	5.35 CFS
MEASUREMENT # 7	-----	18.62 CFS (Please
Note: this is for the total amount of water in Buckeye ditch.)		
Measurement # 7	-----	12.92 CFS (please
note this is for the water used for fish propogation.)		
MEASUREMENT # 8	-----	7.35 CFS
MEASUREMENT # 9	-----	.80 CFS
MEASUREMENT # 10	-----	11.37 CFS
MEASUREMENT # 11	-----	3.75 CFS
MEASUREMENT # 12	-----	27.35 CFS
MEASUREMENT # 13	-----	20.28 CFS
MEASUREMENT # 14	-----	23.78 CFS
HUNT FISH HATCHERY MEASUREMENT	-----	66.60 CFS
HUNT/BUCKEYE FISH HATCHERY MEASUREMENT	-----	67.99 CFS

PLEASE NOTE: See attached sheets for measuremnt calculations.

MEASUREMENTS INVOLVED WITH BUCKEYE FARMS FIELD EXAMS

The measurements for the inflows from all four sources of the Buckeye Farm's water sources are a complex set of processes. Only the Buckeye Ditch provided a simple measurement from a single source. Therefore, I have created a map attached to this memo that shows all of the points that were measured and have marked the measurement positions as M= #. I will explain how the measurements were used to attain the diversion rate for each source for the pond use and the fish hatchery diversions will be calculated on each hatchery separately.

WHEATHERBY SPRINGS AND BILLINGSLEY CREEK WATER THROUGH THE CURREN DITCH:

Weatherby Springs diverts into a fish hatchery and then into the Weatherby ditch which empties into the Curren Ditch. The Curren Ditch water is then diverted with a portion going to Buckeye Farms and the remainder going to other users down the creek. Therefore, in order to determine the amount of Weatherby Springs and Billingsley Creek water that was used by Buckeye Farms, I measured Weatherby Springs at the fish hatchery (M=13) and the amount of Billingsley Creek water diverted into the Curren Ditch (M=12). This allowed me the ability to determine the percentage of each source flowing in the Curren Ditch. I then measured the amount of water that was being sent to Buckeye Farms through the diversion on the Curren Ditch (M=13) and in their pipeline using a polysonic unit (M=14). I was more comfortable with the Polysonic measurement due to the condition of the weir at the Current Ditch Split (M=13). Therefore, I used the pipeline measurement (M=14) to calculate the amount of water being delivered to Buckeye Farms from the Curren Ditch. The amount of Curren Ditch water being sent to Buckeye Farms would have a proportionate share of Weatherby Springs water and Billingsley Creek water.

Weatherby Springs measurement M=11	=	3.75 cfs
<u>Billingsley Creek diversion measurement M=12</u>	=	<u>27.35 cfs</u>
TOTAL water in Curren Ditch	=	31.10 cfs

$3.75 / 31.10 = 12 \%$ of Curren Ditch water comes from Weatherby Springs

$27.35 / 31.10 = 88 \%$ of Curren Ditch water comes from Billingsley Creek

Amount of water sent to Buckeye Farms from Curren Ditch = 23.78 cfs

$23.78 \text{ cfs} \times .12 = 2.85 \text{ cfs}$ of the water from the Curren Ditch comes from Weatherby Springs.

$23.78 \text{ cfs} \times .88 = 20.78 \text{ cfs}$ of the water from the Curren Ditch comes from Billingsley Creek.

Weatherby Springs Diversion Rate = 2.85 cfs

Billingsley Creek Diversion rater at the Curren Ditch = 20.78 cfs

RILEY CREEK DIVERSION AT HUNT DITCH:

The only place a measurement could be made on the Hunt Ditch was at the Hunt Ditch Fish Hatchery. The measurement at this point was 66.60 cfs. However, water from the Curren Ditch enters the Hunt Ditch before it reaches the hatchery in two places and some of the Riley Creek water is diverted into the pond number 25. The percentages of the water in the Curren Ditch from Wheatherby Springs and Billingsley Creek have already been determined. However, I needed to separate the Riley Ditch water and the Curren Ditch water. Fortunately the discharge points from the ponds both had measurement points as did the diversion point sending water from the Hunt Ditch into pond 25. The first discharge point (M=10) into the Hunt Ditch was solely Curren Ditch water so it did not need to be adjusted. There was very little Riley Creek water lost when it flowed into Pond 25 where it co-mingled with the remainder of the Curren Ditch water. Therefore, I could subtract the amount of Riley Creek water being diverted into the pond (M=9) from the amount of water being discharged back into the Hunt Ditch (M=8) to determine the amount of Curren water that was being discharged into the Hunt Ditch at this point.

Riley Creek and Curren Ditch water flowing back into Hunt Ditch (M=8)	=	7.35 cfs
<u>Riley Creek water being diverted into pond 25 (M=9)</u>	=	<u>0.80 cfs</u>
Curren Ditch water being diverted into Hunt Ditch at pond 25	=	6.55 cfs

Curren Ditch water being diverted into Hunt Ditch at pond 25	=	6.55 cfs
<u>First discharge of Curren Ditch water into hunt ditch (M=10)</u>	=	<u>11.37 cfs</u>
TOTAL amount of Curren Ditch water diverted into Hunt Ditch	=	17.92 cfs

Hunt Fish Hatchery measurement	=	66.60 cfs
Curren Ditch water in Hunt Ditch	=	17.92 cfs
TOTAL of Riley Creek water being diverted in Hunt Fish Hatchery	=	48.68 cfs

48.68 cfs of water being diverted from Riley Creek to ponds and fish hatchery.

BUCKEYE DITCH MEASUREMENT:

This is the only diversion that could be adequately measured (M=7). I measured 18.62 cfs for this ditch. A portion of this water was being diverted into the ponds and 12.92 cfs was being sent to the Buckeye/Hunt fish hatchery. They are at the end of this ditch and are basically subject to whims of the upstream users. They try to maintain a flow of 12.0 cfs to the fish hatchery if possible.

Buckeye Ditch measurement = 18.62 cfs.

FISH PROPOGATION FLOW RATE CALCULATIONS:

Jim Stanton performed a measurement on the Buckeye Ditch diversion from Billingsley Creek of 12.0 cfs. I confirmed this in my field exam of the place of use that 12.92 were being diverted. The permit only allows 12.0 cfs, but they are at the end of the ditch and have to manage what water comes down the ditch. The Buckeye Ditch water only delivers water to Buckeye/Hunt fish hatchery, so this is all that should be allowed from this diversion. The remaining water has been calculated above with 48.68 cfs of Riley Creek water and 17.92 cfs of Curren Ditch water. All that remains to do is calculate the amount of Wheatherby Springs water and Billingsley Creek water that is in the Curren Ditch water using the percentages calculated above of 12% and 88%.

$17.92 \text{ cfs} \times .12 = 2.15 \text{ cfs}$ of Wheatherby Springs water used For Fish Propagation

$17.92 \text{ cfs} \times .88 = 15.77 \text{ cfs}$ of Billingsley Creek water used for Fish Propagation

THEREFORE, THESE ARE DIVERSION RATES FOR FISH PROPAGATION PER SOURCE:

Wheatherby Springs through Curren Ditch	=	2.15 cfs
Billingsley Creek through Curren Ditch	=	15.77 cfs
Riley Creek through Hunt Ditch	=	48.68 cfs
Billingsley Creek through Buckeye Ditch	=	12.00 cfs
TOTAL WATER FOR FISH PROPOGATION	=	78.6 CFS

WEIR MEASUREMENT

MEASUREMENT # 4:

MEASUREMENT # 4 WAS TAKEN ON A WEIR PRIOR TO POND 37. POND 37 DISCHARGES DIRECTLY INTO THE RIVER AND IT WAS NOT POSSIBLE TO ATTAIN A MEASUREMENT AT THAT POINT.

WEIR FORMULA USED:

THE FOLLOWING WEIR FORMULA

$$Q = (3.33) (\text{LENGTH}) (\text{HEAD}^{1.5})$$

(This is computed using the Francis formula, neglecting the velocity of approach. Since the measurement was made at a fairly level point velocity of approach was not a factor.)

FLOWS IN CUBIC FEET PER SECOND (CFS)

LENGTH -- 3.85 FT. WEIR

HEAD -- 1.20 FT. HEAD

$$Q = (3.33) (L) (H^{1.5})$$

$$Q = (3.33) (3.85) (1.20^{1.5}) \text{ OR } Q = 16.85 \text{ CFS}$$

WEIR MEASUREMENT

MEASUREMENT # 5:

MEASUREMENT # 5 WAS TAKEN ON A WEIR BETWEEN PONDS 36 AND 37. AT THIS POINT POND 36 DISCHARGES INTO POND 37 AND POND 37 DISCHARGES DIRECTLY INTO THE RIVER AND IT WAS NOT POSSIBLE TO ATTAIN A MEASUREMENT AT THAT POINT.

WEIR FORMULA USED:

THE FOLLOWING WEIR FORMULA

$$Q = (3.33) (\text{LENGTH}) (\text{HEAD}^{1.5})$$

(This is computed using the Francis formula, neglecting the velocity of approach. Since the measurement was made at the discharge point of a pond the velocity of approach was not a factor.)

FLOWS IN CUBIC FEET PER SECOND (CFS)

LENGTH -- 4.10 FT. WEIR

HEAD -- 1.20 FT. HEAD

$$Q = (3.33) (L) (H^{1.5})$$

$$Q = (3.33) (4.10) (1.20^{1.5}) \text{ OR } Q = 17.95 \text{ CFS}$$

MEASUREMENT # 6:

MEASUREMENT # 6 WAS TAKEN ON A WEIR AT THE POINT WHERE POND 36 DISCHARGES INTO THE SNAKE RIVER.

WEIR FORMULA USED:

SAME AS ON MEASUREMENT # 5

FLOWS IN CUBIC FEET PER SECOND (CFS)

LENGTH -- 4.05 FT. WEIR

HEAD -- .54 FT. HEAD

$$Q = (3.33) (L) (H^{1.5})$$

$$Q = (3.33) (4.05) (.54^{1.5}) \text{ OR } Q = 5.35 \text{ CFS}$$

WEIR MEASUREMENT

BUCKEYE DITCH MEASUREMENT #7:

THERE WILL BE TWO MEASUREMENTS FROM THIS POINT OF DIVERSION. THE FIRST MEASUREMENT WILL BE FOR THE WATER USED IN THE HUNT/BUCKEYE FISH HATCHERY AND THE OTHER WILL BE FOR THE TOTAL AMOUNT OF WATER IN THE BUCKEYE DITCH.

WEIR FORMULA USED:

THE FOLLOWING WEIR FORMULA

$$Q = (3.33) (\text{LENGTH}) (\text{HEAD}^{1.5})$$

(This is computed using the Francis formula, neglecting the velocity of approach. Since the measurement was made at a fairly level point velocity of approach was not a factor.)

FLOWS IN CUBIC FEET PER SECOND (CFS)

TOTAL AMOUNT OF WATER IN BUCKEYE DITCH:

LENGTH -- 4.0 FT. WEIR

HEAD -- 1.25 FT. HEAD

$$Q = (3.33) (L) (H^{1.5})$$

$$Q = (3.33) (4.0) (1.25^{1.5}) \text{ OR } Q = 18.62 \text{ CFS}$$

HUNT/BUCKEYE FISH HATCHERY PORTION OF BUCKEYE DITCH WATER:

LENGTH -- 4.0 FT. WEIR

HEAD -- .98 FT HEAD

$$Q = (3.33) (L) (H^{1.5})$$

$$Q = (3.33) (4.05 \text{ FT.}) (.98^{1.5}) \text{ OR } Q = 12.92 \text{ CFS}$$

WEIR MEASUREMENT

MEASUREMENT: #8 AND #9

WHEATHERBY/CURREN WATER'S DISCHARGE INTO HUNT DITCH OUT OF POND #26

THERE WAS WATER FROM HUNT DITCH (MEASUREMENT # 9) ENTERING POND # 26 AND CO-MINGLING WITH WHEATHERBY/CURREN WATER AT ON END OF POND # 26 AND THEN BOTH WHERE DISCHARGED AT THE OTHER END OF THE POND (MEASUREMENT # 8). THEREFORE TO ATTAIN THE TOTAL DISCHARGE OF WHEATHERBY/CURREN WATER OUT OF POND # 26 MEASUREMENT #9 MUST BE SUBTRACTED FROM MEASUREMENT #8.

WEIR FORMULA USED:

THE FOLLOWING WEIR FORMULA

$$Q = (3.33) (\text{LENGTH}) (\text{HEAD}^{1.5})$$

(This is computed using the Francis formula, neglecting the velocity of approach. Since the measurement was made at the *Discharge point of a Pond* velocity of approach was not a factor.)

FLows IN CUBIC FEET PER SECOND (CFS)

MEASUREMENT # 9:

LENGTH -- 4.6 FT. WEIR
HEAD -- .14 FT HEAD

$$Q = (3.33) (4.6 \text{ FT.}) (.14 ^ 1.5) = .80 \text{ CFS}$$

MEASUREMENT # 8:

LENGTH -- 4.75 FT. WEIR
HEAD -- .60 FT HEAD

$$Q = (3.33) (4.75 \text{ FT.}) (.60 ^ 1.5) = 7.35 \text{ CFS}$$

TOTAL WHEATHERBY/CURREN WATER DISCHARGE INTO HUNT DITCH FROM POND #26

MEASUREMENT #8 - MEASUREMENT #9 = TOTAL WHEATHERBY/CURREN DISCHARGE

7.35 CFS - .80 CFS = 6.55 WHEATHERBY/CURREN DISCHARGE INTO THE HUNT DITCH

WEIR MEASUREMENT

MEASUREMENT: #10

WHEATHERBY/CURREN DISCHARGE INTO HUNT DITCH FROM POND # 25

WEIR FORMULA USED:

THE FOLLOWING WEIR FORMULA

$$Q = (3.33) (\text{LENGTH}) (\text{HEAD}^{1.5})$$

(This is computed using the Francis formula, neglecting the velocity of approach. Since the measurement was made at the discharge point of a pond velocity of approach was not a factor.)

FLOWS IN CUBIC FEET PER SECOND (CFS)

LENGTH -- 4 FT. WEIR
HEAD -- .90 FT HEAD

$$Q = (3.33) (4 \text{ FT.}) (.90 ^{1.5}) = 11.37 \text{ CFS}$$

TOTAL DISCHARGE OF WHEATHERBY/CURREN WATER INTO HUNT DITCH:

TOTAL WHEATHERBY/CURREN DISCHARGE INTO HUNT DITCH FROM POND #26 (WC POND 26) PLUS WHEATHERBY/CURREN DISCHARGE INTO HUNT DITCH FROM POND # 25 (WC POND 25) EQUALS TOTAL WHEATHERBY/CURREN DISCHARGE INTO HUNT DITCH.

6.55 CFS WC POND 26 + 11.37 WC POND 25 = 17.92 CFS DISCHARGED INTO HUNT DITCH FROM WHEATHERBY & CURREN POINTS OF DIVERSIONS.

WEIR MEASUREMENT

MEASUREMENT: #11

WEATHERBY P/D

WEIR FORMULA USED:

THE FOLLOWING WEIR FORMULA

$$Q = (3.33) (\text{LENGTH}) (\text{HEAD}^{1.5})$$

(This is computed using the Francis formula, neglecting the velocity of approach. Since the measurement was made at the end of a fish raceway velocity of approach was not a factor.)

FLows IN CUBIC FEET PER SECOND (CFS)

LENGTH -- 5 FT. WEIR
HEAD -- .37 FT HEAD

$$Q = (3.33) (5 \text{ FT.}) (.37^{1.5}) = 3.75 \text{ CFS}$$

WEIR MEASUREMENT

MEASUREMENT: #12

CURREN P/D

WEIR FORMULA USED:

THE FOLLOWING WEIR FORMULA

$$Q = (3.33) (\text{LENGTH}) (\text{HEAD}^{1.5})$$

(This is computed using the Francis formula, neglecting the velocity of approach. Since the measurement was made at the end of a fish raceway velocity of approach was not a factor.)

FLows IN CUBIC FEET PER SECOND (CFS)

LENGTH -- 10 FT. WEIR
HEAD -- .87 FT HEAD

$$Q = (3.33) (10 \text{ FT.}) (.87^{1.5}) = 27.35 \text{ CFS}$$

WEIR MEASUREMENT

MEASUREMENT: #13

THE WHEATHERBY/CURREN DITCH'S SPLIT INTO TWO CHANNELS:

AFTER THE CURREN AND WHEATHERBY CO-MINGLE THE DITCH FORKS INTO TWO DIRECTIONS. ONE DIRECTION IS USED EXCLUSIVELY BY BUCKEYE FARMS AND THE OTHER DIRECTION IS USED BY OTHER WATER RIGHT HOLDERS OTHER THAN BUCKEYE FARMS.

PLEASE NOTE: THERE WILL BE TWO MEASUREMENTS CALCULATED.

WEIR FORMULA USED:

THE FOLLOWING WEIR FORMULA

$$Q = (3.33) (\text{LENGTH}) (\text{HEAD}^{1.5})$$

(This is computed using the Francis formula, neglecting the velocity of approach. Since the measurement was made at a fairly level point velocity of approach was not a factor.)

FLOWS IN CUBIC FEET PER SECOND (CFS)

BUCKEYE FARMS PORTION OF SPLIT:

LENGTH -- 6 FT. WEIR
HEAD -- 1.01 FT HEAD

$$Q = (3.33) (6 \text{ FT.}) (1.01^{1.5}) = 20.28 \text{ CFS}$$

PLEASE NOTE: I am not confident that this reading is as accurate as the polysonic reading on the pipe due to fluctuating water levels.

OTHER USERS PORTION OF SPLIT:

LENGTH -- 6 FT. WEIR
HEAD -- .47 FT. HEAD

$$Q = (3.33) (6 \text{ FT.}) (.47^{1.5}) = 6.44 \text{ CFS}$$

Re: 1996 Water Measurement Report Forms - Hunt Ditch

Dear Mr. Yore:

Thank you for promptly returning the 1995 water measurement report form(s). The report which you submitted was complete and met the Department's minimum measurement and reporting guidelines. The Department appreciates your diligent effort and cooperation.

Attached to this letter is an expanded rating table which I developed for the Hunt Ditch headgate. When I visited with you and Mr. LeMoyné last spring, I indicated that I would help provide an expanded table. This table provides measurements for each half-inch of head and gate opening instead of going every inch. The table also expands the head amount to 28 inches, where the previous table ended at 24 inches.

I also wish to inform you that following our meeting last spring, I returned to the ditch to field calibrate your headgate and measurement method. On July 6, I made a current meter measurement of the ditch and compared this measurement to the headgate measurement method which you described to me. The current meter measurement was made just below the headgate and resulted in a measured flow of 35.3 cfs. Applying the submerged orifice formula from your table with careful head and area measurements of the headgate orifice/slucice gate device resulted in a discharge of 35.02 cfs. The difference between the two measurements is less than 1 percent. I also applied a modified sluice gate formula and obtained a measurement of 34.3 cfs, a difference of less than 3 percent.

I notice from the report you submitted that your measurements of July 2 and July 9 are 26.5 and 28.5 cfs respectively. This is considerably lower than the 35 cfs which I measured on July 6. The difference may be due to higher stream flow on July 6 or could be due to error in gate opening and head measurements. Please take special care in measuring the head and gate opening, particularly at higher flows.

Enclosed is a new report form for calendar year 1996. This report form must be completed during 1996 and returned to the Department on or before January 15, 1997.

Please note the the 1996 reporting period is from January 1 through December 31. If your diversion is for non-irrigation uses or is a year-round diversion, then you must immediately begin recording diversions, including any diversions between January 1 and the time which you receive this report. If your diversion operates for only part of the year, please record measurements for that period.

Please refer to instructions on page 5 of the attached report for details about completing the measurement report. You may contact me directly at 327-7864 if you have questions about measurement and reporting.

Thanks again for your cooperation.

Sincerely,

A handwritten signature in cursive script that reads "Tim Luke".

Tim Luke

WATER MEASUREMENT REPORT FORM
FOR
OPEN CHANNEL MEASUREMENT

1995 Reporting Form

RECEIVED
JAN 04 1995

Department of Water Resources

Year end data must be submitted to Idaho Department of Water Resources, 1301 N. Orchard, Boise Idaho 83706, on or before January 15, 1996.

NOTE: Please submit a separate reporting form for each diversion from a public water source. Refer to page 4 for detailed instructions.

This report form may be used for the following diversion:

Diversion Name or Facility: HUNT DITCH
Water Source: RILEY CREEK

Water Right(s) Owner or Contact:
(owner name(s) may be omitted if there
are multiple owners on same diversion)

SECTION 1. Water Right Holder/Operator Information

Name and Address of Water Right Holder

(If there are multiple water right holders on a common ditch or conveyance system, please designate the contact person below)

Current Owner

Name YOORE DAN J.
Last, First, MI

Phone 837-6595

Address 18335 U.S. Hwy 30

Fax 837-4998

City HAGERMAN

State & Zip Idaho, 83332

Original Owner (if sold within last year)

Name _____
Last, First, MI

Phone _____

Address _____

Fax _____

City _____

State & Zip _____

Operator or Contact Person

Name _____
Last, First, MI

Phone _____

Address _____

Fax _____

City _____

State & Zip _____

SECTION 3. Measuring Device Information

A. Type & Description of Measuring Device(s):

Sluice Gate with Rating Table

B. Attach copies of all measuring device rating tables to this report.

SECTION 4. Certification

I hereby certify that the information reported is correct to the best of my knowledge and that I recognize that willful submittal of false or inaccurate data is a violation of law subject to the penalty provisions of Sections 42-311, 42-350 and 42-351, Idaho Code.

Don J. Gore

Date

1-2-1996

Note: Each reporting form shall be accompanied by a report processing fee in the amount of twenty dollars (\$20) per diversion made payable to the Idaho Department of Water Resources. (Section 42-701(6), Idaho Code). All domestic uses, as defined in Section 42-111, Idaho Code, and all stockwatering uses, as defined in Section 42-1401A(12), Idaho Code, are exempt from measurement and reporting requirements.

For Department Use Only

Received by _____ Date _____ Time _____

Fee amount submitted _____ Correct? yes _____ no _____

Receipted by RT Receipt No. 0034296

Data Entry by _____ Date 1-6-96

Total Annual Flow (CFS) _____

Total Annual Volume (Acre-Feet) _____

Buckeye Farms - New Applications filed 10/98 (3 applications)

Dear Allen:

As we discussed with you on Monday, we hereby formally request that we be notified and receive copies of all further actions taken on the above referenced Applications for permit and Permits being processed to licenses. As we stated, we will be submitting comments with respect to all of these applications and/or permits being processed to licenses.

We are requesting this information in accordance with the Idaho Code Administrative Procedures Act.

Please send all notices to:

Western Legends LC
P. O. Box 737
Hagerman, ID 83330

Thank you for your cooperation in this matter.

Very truly yours,

WESTERN LEGENDS LC

Michael McCarthy
Co-Manager
