36-16183 Clarifying POD Remark

Steve,

Thank you for getting back to us about this license Steve, the information was very helpful. The licensed POD location is T08S, R27E, S33, SESESW however, IDWR's gps point found the well to be 1 meter into the SWSE.

Instead of filing a petition and a license amendment to change the POD's location to the SWSWSE, perhaps we could ask IDWR to add a remark to clarify the POD's location? The Remark would read something to the effect:

"The POD lies on the line between the SWSWSE and the SESESW of S33, T08S, R27E." Attached is an image showing this. What do you think?

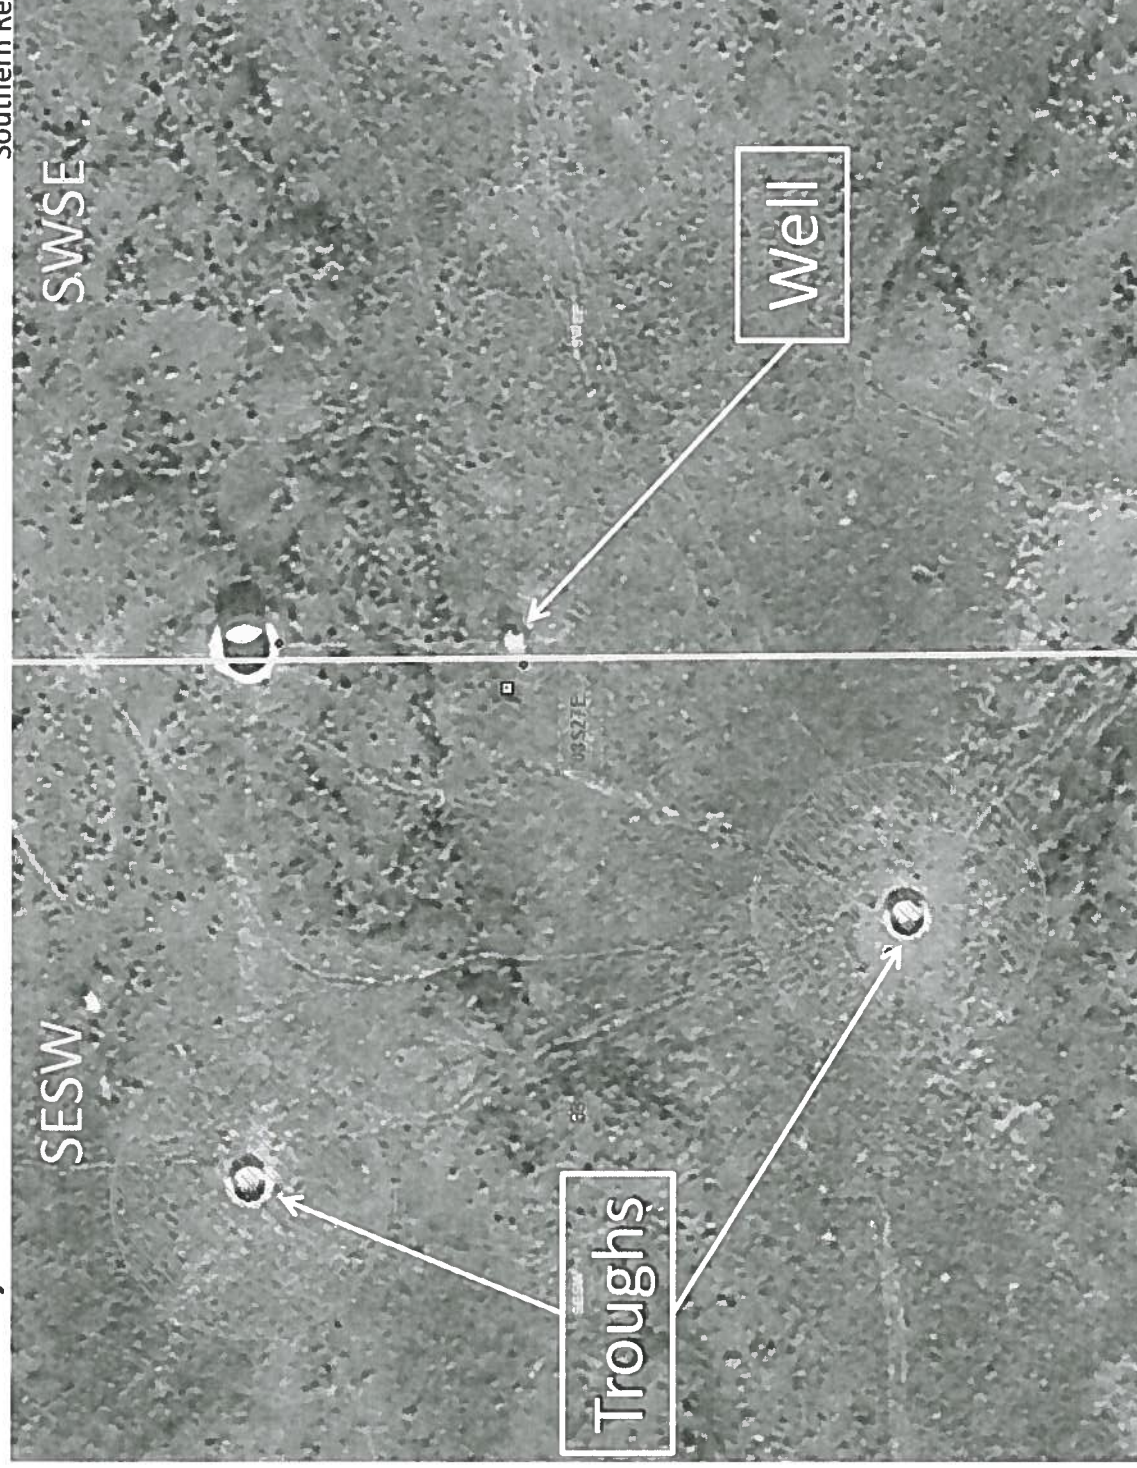

(See attached file: 36-16183.pdf)

Southern Regional Office

This is Bing Map 2010 imagery in ArcMap 10. This updated software shows the POU for the Troughs is consistent with the license. However, the well is found approximately 1 meter to the east of the coordinate line, placing it in the SWSE QQ when the license describes it in the SESW QQ. Because the well is so close to the coordinate line, and the legal description in the permit and licensing process appeared to be correct with older NAIP imagery, the BLM wishes to clarify the location of the POD (well) with the remark: "The POD lies on the line between the SESESW and the SWSWSE."
