Re: City of Rexburg Transfer Application

Dear Reviewing Agent,

Please find enclosed an Application for Transfer of Water Right –Points of Diversion for the City of Rexburg. Recently, Idaho Department of Water Resources approved Transfer Application No. 76375 that added all municipal wells to five of the City's water rights. After the transfer was approved, the City made an agreement with BYU-Idaho to lease a well and its accompanying water right no. 22-4130 for the City's use. The City seeks to use the leased well year-round to deliver a portion of its other water rights. This application proposes to add the BYU-Idaho well as a point of diversion for the City's water rights.

ESPA Analyses were previously run to determine the effects of Transfer No. 76375. Centroids for each the existing wells and the proposed new wells were used for the analyses. The overall effects were determined and conditions of approval were placed on the transferred water rights to prevent over-pumping in certain locations.

The application enclosed proposes to add the BYU-Idaho well as another point of diversion. This well is located adjacent to the existing well centroid that was used in the ESPA Analysis for Transfer No. 76375. Due to the BYU-Idaho well location, it is proposed that no additional affects will result from approval of this transfer application, and thereby, no additional ESPA Analysis is required.

This transfer application will also add the municipal wells to water right no. 22-13790, which was not previously included in Transfer No. 76375 due to a disallowed recommendation. The right has since been recommended favorably, and it is proposed to add the points of diversion described on the application.

Respectfully,

A handwritten signature in blue ink that reads "Kristin Moore".
