Cindy,

Only two wells at the Sauer Dairy according to Donnie Aardema. He said there may have been one of the residence houses well that could have been at one time going to the original dairy.

Gary –

I called Tom McCord and he is not our units culprit. He indicates he's using gallons X 1000 unless instructed differently. He thought it was probably someone at Eaton. I will alert Brian.

I was somewhat in error about the status of the Aardema transfers – the one for Double A is moving forward. The one for Franco dairy is still stalled (needs re-reviewed). The Sauer dairy transfer is waiting on the Franco transfer. However it appears there was an earlier transfer approved at Sauer totaling 23.5 AF so there are some rights there. Not sure how much the second transfer proposes to add.

The pending Sauer transfer also looks to be adding a THIRD well to the system – is this correct, or will there just be two?
