Dear Ron Shurtliff,

Per our conversation approximately two weeks ago, it was predetermined that you require a measuring device on permit nos. 65-22903 and 65-22904, Hultgren and Bevan.

In our conversation you determined that a documented number of sprinkler heads and flow would suffice. At present time we are using 10 rainbird sprinklerheads with 1/8 inch orifice that produce 2.9 gallons per minute per head or 29 gallons per minute for all 10 heads.

The irrigation time used is every two days for three to four hours.

This irrigation data is same for each individual permit.

Please advise if any further information is needed.

Sincerely,

Irene Hultgren
