RE: Application for Permit #63-33204

Dear Mr. Jorgensen:

Our staff has initiated the review and processing of your application received in late January 2011. The review has drawn our attention to the proposed well source. The well driller's report has a down-hole water temperature of 90 degrees listed, see attached.

Idaho Code 42-233 defines low temperature geothermal resources and associated beneficial use. Water sources with a temperature greater than 85 degrees are classified a low temperature geothermal source. Under this classification, geothermal sources must be utilized primarily for the heat value first and secondarily for the value as water. Use of the resource primarily for reasons other than the heat value is not a beneficial use of the resource, reference enclosed.

Please provide one of the following options for processing of your application to continue:

- A down-hole temperature measurement of the well that certifies the temperature is below 85 degrees Fahrenheit. This must be done by a certified individual.*
- Information and specifications the primary beneficial use of all the water (.2 cfs) will be for heat value first. #4 Use- under your application will also need to be changed*
- Change the water source (well) to a different cold water well, provide the tag number and location legal description.*

Please submit your response by **July 1, 2011** to retain the application processing position. An untimely response will result in the application ordered void.

Should you have questions, please contact me at the Western Regional Office, phone 334-2190.

Sincerely,

John Westra, Manager
