

MEMORANDUM

Date: April 01, 2011
To: Water Right File 13-7636
From: csaxton
Re: Source

USGS quad makes it look like the source could be an unnamed intermittent stream that is tributary to the Bear River. The field examiner, Keith Wilson, did not include photos of the POD or a system description that would help in verifying the source. However, 1992 thru 2009 air photography shows that the land between the spring and the Bear River is plowed and therefore, if there was a natural channel to carry spring water to the Bear River, it was not there at the time this water right was developed. Therefore recommending this as spring tributary to sinks seems appropriate based on available evidence and is consistent with the field examiners recommendation.
